Devised
Cotton Broad-Woven Goods
First Quarter 1966 To Third Quarter 1967

FOR RELEASE: January 26, 1968

SERIES: M22T.1

A review of the information published in this series has revealed some reporting errors of toweling and combed bed sheeting fabrics for selected fabric descriptions. The following changes should be made in this publication of M22T.1, Cotton Broad-Woven Goods, for the first quarter 1966 through the third quarter 1967. In addition, you should note in your review of these data that the significant revisions are indicated with an asterisk.

Cotton Broad-Woven Goods

Second Quarter 1966

FEB 1 1966

142-A

FOR RELEASE : December 30, 1966

SERIES: M22T,1(66)-1

Cotton broad-woven fabrics production in the second quarter of 1966 was one percent below previous quarter.

Production of colored yarn fabrics was 8 percent below the previous quarter's level, while fine cotton fabrics decreased 5 percent and duck and allied fabrics 4 percent. Other fabrics and specialties increased four percent, and towelings 2 percent. Other fabric classes showed changes of only one percent.

COVERAGE—The figures included in this report represent the entire production of cotton broad-woven fabrics over 12 inches wide. Estimates have been included for all manufacturers whose reports were not received in time for tabulation. Such companies accounted for approximately 2 percent of the total production.

COVERAGE OF INDIVIDUAL TABLES—The information contained in this report is collected on Census Form

M22T, Broad Fabrics (Except Knit); Woven, Nonwoven, and Felts. A separate report is obtained from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings at the same or nearby locations. In the tabulation of these reports, the production figures shown in tables 1, and 2 represent total production of cotton fabrics by all known weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, and 5 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produce tire cord or man-made fiber or wool fabrics as secondary products, the yarn consumption or loom activity for such fabrics would be included in this report. Where cotton fabrics are secondary products of a mill primarily producing man-made fiber fabrics, yarns consumed in their manufacture are excluded from this report. They are included in Current Industrial Reports relating to man-made fiber broad-woven fabrics.

Table 1.—SUMMARY OF PRODUCTION, BY CLASS OF FABRIC

(Thousands of linear yards)

Type of goods	1966	
	April-June (preliminary)	January-March
COTTON BROAD-WOVEN GOODS, TOTAL.....	2,270,472	2,244,720
Duck and allied fabrics.....	15,753	18,720
Sheeting and allied coarse and medium yarn fabrics.....	216,704	183,264
Print cloth yarn fabrics.....	202,307	204,170
Colored yarn fabrics.....	104,336	114,239
Towels, toweling, and dishcloths.....	170,796	168,058
Harped fabrics, blankets and blanketing.....	38,764	38,473
Fine cotton fabrics.....	248,395	316,150
Other woven cotton fabrics and specialties.....	11,916	112,150

Revised.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

Cotton Broad-Woven Goods

Third Quarter 1966

142-A

FOR RELEASE: February 28, 1967

SI RH-8: M22T,1(66)-2

Cotton broad-woven fabrics production in the second quarter of 1966 was 9 percent below previous quarter.

Production of duck and allied fabrics increased one percent while all other fabric classes decreased. Print cloth fabrics were 12 percent below the previous quarter's level, while toweling decreased 11 percent, and fine cotton fabrics 10 percent. Other fabric classes showed decreases of from 4 to 8 percent.

COVERAGE.—The figures included in this report represent the entire production of cotton broad-woven fabrics over 12 inches wide. Estimates have been included for all manufacturers whose reports were not received in time for tabulation. Such companies accounted for approximately 2 percent of the total production.

COVERAGE OF INDIVIDUAL TABLES.—The information contained in this report is collected on Census Form M22T, Broad Fabrics (Except Knits): Woven, Nonwoven,

and Felts. A separate report is obtained from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings at the same or nearby locations. In the tabulation of these reports, the production figures shown in tables 1 and 2 represent total production of cotton fabrics by all known weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, and 5 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produce tire cord or man-made fiber or wool fabrics as secondary products, the yarn consumption or loom activity for such fabrics would be included in this report. Where cotton fabrics are secondary products of a mill primarily producing man-made fiber fabrics, yarns consumed in their manufacture are excluded from this report. They are included in Current Industrial Reports relating to man-made fiber broad-woven fabrics.

the Technical Papers of the Bureau of the Census . . .

... constitute a series of special studies on the history, methodology, and evaluation of Bureau surveys and publications. Not statistical reports but rather supplements to statistical reports and statistical programs, Technical Papers present valuable background information for users of Census Bureau data. The selected titles in the adjoining list are available from the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at the prices indicated.

Information on earlier titles as well as titles in a companion series, Working Papers, is available from the Bureau of the Census, Washington, D.C., 20233.

Cotton Broad-Woven Goods

Fourth Quarter 1966

D255

FOR RELEASE: May 2, 1967

SERIES: M22T.1(66)-3

The information contained in this report is collected on Census Form M22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings at the same or nearby locations. In the tabulation of these reports, the production figures shown in tables 1 and 2 represent total production of cotton fabrics by all known weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in

tables 3, 4, and 5 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produce tire cord or man-made fiber or wool fabrics as secondary products, the yarn consumption or loom activity for such fabrics would be included in this report. Where cotton fabrics are secondary products of a mill primarily producing man-made fiber fabrics, yarns consumed in their manufacture are excluded from this report. They are included in Current Industrial Reports relating to man-made fiber broad-woven fabrics.

Table 1.--SUMMARY OF PRODUCTION, BY CLASS OF FABRIC

(Thousands of linear yards)

Type of goods	1966	
	Oct.-Dec. (Preliminary)	July-Sept. ^r
COTTON BROAD-WOVEN GOODS, TOTAL.....	2,180,710	2,083,202
Duck and allied fabrics.....	77,715	69,074
Sheeting and allied coarse and medium yarn fabrics.....	660,681	633,950
Print cloth yarn fabrics.....	744,644	715,012
Colored yarn fabrics.....	105,382	100,674
Towels, toweling, and dishcloths.....	161,751	154,399
Napped fabrics, blankets and blanketing.....	41,429	35,724
Fine cotton fabrics.....	271,969	266,961
Other woven cotton fabrics and specialties.....	117,139	107,408

142-A Cotton Broad-Woven Goods

1965 and 1966

 MAY
1966

FOR RELEASE: February 23, 1968

SERIES: M22F.1(66)-4

The data shown in this report summarizes the information published in the quarterly M22F.1 series. Except for survey item codes 2402, 2404, 2644, and 2646, no revisions have been made in the detailed figures.

DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series M22F.1, Cotton Broad-Woven Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broad-woven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1965 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

COVERAGE

The information contained in this report is collected on Census quarterly form M22F, "Broad Fabrics (Except Knit): Woven, Non-woven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

REVISED COTTON CLASSIFICATIONS

The product classifications for cotton fabrics were revised substantially in 1966 in order to reflect current production and marketing categories more accurately. The 1966 statistics are thus not directly comparable to 1965 and previous years.

In this report, 1966 detailed data (with revisions where necessary) are shown in table 2A but 1965 figures comparable are shown in table 2B.

COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary product, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broad-woven fabrics.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

LIBRARY

WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series M22K, Shipments of Knit Cloth, including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

DEFINITION OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

ACKNOWLEDGMENTS--This report was prepared in the Industry Division under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Evelyn O. Denny, Chief, Textiles, assisted by Charles T. Lee, was directly responsible for the review of the data and preparation of the report.

¹The information for 1955 is based on preliminary data for the year ending on July 20, 1955. Revised quarterly figures for 1955 were not requested of the reporting mills. The information for 1956 is based on July 20, 1956. Revised quarterly figures for 1956 were not requested of the reporting mills. The information for 1957 is based on July 20, 1957. Revised quarterly figures for 1957 were not requested of the reporting mills. The information for 1963 is based on July 20, 1963. Revised quarterly figures for 1963 were not requested of the reporting mills. The information for 1966 is based on July 20, 1966. Revised quarterly figures for 1966 were not requested of the reporting mills. The information for 1967 is based on July 20, 1967. Revised quarterly figures for 1967 were not requested of the reporting mills.

²Data are for a 52-week reporting period.

Table 28.--PRODUCTION OF COTTON BROAD-WOVEN GOODS, BY TYPE, BY QUARTER: 1965

(Thousands of linear yards)

Type of goods	Reference list number	1965	1965			
			October-December	July-September	April-June	January-March
COTTON BROAD-WOVEN GOODS OVER 12 INCHES IN WIDTH.....	9,235,775	2,310,137	2,187,569	2,373,967	2,364,202
TYPE AND ALLIED FABRICS (INCLUDING COMBED YARN)	347,754	87,381	87,651	58,290	64,077
Cheese duck.....	175,340	47,142	40,712	40,287	47,219
Army duck (including shoe duck, wide army duck and pilled warp and filling wadding stripes)	46,212	11,877	10,032	11,000	11,238
24" x 2" oz. basic weight--all widths.....	1001	1,020	252	252	277	235
24" x 10 and 12 oz. basic weight--all widths.....	1006	2,151	555	474	587	605
All other army duck construction, including shelter tent.....	1011	2,440	7,101	6,246	6,729	6,278
1st duck (including encasement mat and single part wadding stripes)	131,142	35,200	29,754	29,225	31,481
Single filling.....	11,025	28,500	23,345	21,462	26,249
24" x 2" oz. basic weight--all widths.....	1001	1,020	252	252	277	235
24" x 10 and 12 oz. basic weight--all widths.....	1006	10,382	2,484	2,026	2,231	2,844
All other single filling flat duck construction.....	1007	10,005	23,769	19,068	15,954	19,714
Double filling.....	31,572	7,706	6,379	7,565	9,712
24" x 2" oz. basic weight--all widths.....	1001	11,025	2,350	2,077	3,022	3,825
All other double filling flat duck construction.....	1006	19,547	5,356	4,302	4,543	5,887
3rd duck (including narrow, full, wide, and extra wide)	10,422	2,700	2,375	1,571	4,040
10 to 24" inclusive wider than 1st.....	1001	1,020	252	252	277	235
24 to 36" inclusive wider than 1st.....	1006	9,402	2,448	1,933	1,714	1,998
Finger felt.....	1007	821	133	133	129	126
Other covered duck.....	1008	1,000	249	242	752	729
4th and 5th duck--thousands of linear yards.....	1009	19,442	4,108	4,112	4,324	4,136
ore and filling--thousands of pounds.....	1010	19,442	4,108	4,112	4,324	4,136
Filter felt and chain cloth.....	1011	2,000	432	428	425	436
1st and 2nd arm chain duck and 3rd chain fabric (50" x 24").....	1012	10,324	2,139	2,139	2,175	2,311
Miscellaneous broad and filled fabrics.....	1013	1,000	211	211	212	195
CHESTING AND ALLIED CHEESE AND OTHER FABRICS.....	2,347,700	627,005	611,561	683,614	672,125
Cheesing (single part--clear, finger part--all widths)	1,171	2,722	2,142	77,438	71,513
1st duck (24" x 2" oz. basic weight--all widths)	1001	11,025	2,484	2,026	1,752	1,800
2nd duck (24" x 10 and 12 oz. basic weight--all widths)	1006	10,382	2,484	2,026	4,858	3,326
3rd duck (1st duck--for industrial and other uses)	1007	10,382	11,229	10,150	10,340	10,602
All other chesting constructions.....	101,000	20,512	19,332	19,348	55,581
Under 42" wide.....	1014	101,000	20,512	19,332	19,348	55,581
42" and wider.....	1015	1,000	8,114	8,222	8,300	2,702
Cheesing.....	20,144	20,144	20,845	231,427	238,483
1st filling, cheesing for filling.....	132,400	1,126	1,154	25,442	24,810
Under 42" wide.....	1014	132,400	1,126	1,154	25,442	24,810
42" and wider.....	1015	1,000	1,126	1,154	11,245	11,799
Class A average yarn numbers up to 12, inclusive.....	141,794	4,709	3,372	3,842	3,873
12 to 14.....	1016	141,794	4,709	3,372	3,842	3,873
14 to 16.....	1017	1,000	1,126	1,154	11,245	11,799
All other class "A" constructions.....	141,794	4,709	3,372	3,842	3,873
Under 42" wide.....	1016	141,794	4,709	3,372	3,842	3,873
42" and wider.....	1017	1,000	1,126	1,154	11,245	11,799
Class B average yarn numbers 16 and 18 and 18 and 18.....	141,794	4,709	3,372	3,842	3,873
16 to 18.....	1018	141,794	4,709	3,372	3,842	3,873
18 to 20.....	1019	1,000	1,126	1,154	11,245	11,799
All other class "B" constructions.....	141,794	4,709	3,372	3,842	3,873
Under 42" wide.....	1018	141,794	4,709	3,372	3,842	3,873
42" and wider.....	1019	1,000	1,126	1,154	11,245	11,799
Class C average yarn numbers above 18.....	141,794	4,709	3,372	3,842	3,873
18 to 20.....	1020	141,794	4,709	3,372	3,842	3,873
20 to 22.....	1021	1,000	1,126	1,154	11,245	11,799
All other class "C" constructions.....	141,794	4,709	3,372	3,842	3,873
Under 42" wide.....	1020	141,794	4,709	3,372	3,842	3,873
42" and wider.....	1021	1,000	1,126	1,154	11,245	11,799
Class D average yarn numbers above 22.....	141,794	4,709	3,372	3,842	3,873
22 to 24.....	1022	141,794	4,709	3,372	3,842	3,873
24 to 26.....	1023	1,000	1,126	1,154	11,245	11,799
All other class "D" constructions.....	141,794	4,709	3,372	3,842	3,873
Under 42" wide.....	1022	141,794	4,709	3,372	3,842	3,873
42" and wider.....	1023	1,000	1,126	1,154	11,245	11,799
Class E average yarn numbers above 26.....	141,794	4,709	3,372	3,842	3,873
26 to 28.....	1024	141,794	4,709	3,372	3,842	3,873
28 to 30.....	1025	1,000	1,126	1,154	11,245	11,799
All other class "E" constructions.....	141,794	4,709	3,372	3,842	3,873
Under 42" wide.....	1024	141,794	4,709	3,372	3,842	3,873
42" and wider.....	1025	1,000	1,126	1,154	11,245	11,799
Class F average yarn numbers above 30.....	141,794	4,709	3,372	3,842	3,873
30 to 32.....	1026	141,794	4,709	3,372	3,842	3,873
32 to 34.....	1027	1,000	1,126	1,154	11,245	11,799
All other class "F" constructions.....	141,794	4,709	3,372	3,842	3,873
Under 42" wide.....	1026	141,794	4,709	3,372	3,842	3,873
42" and wider.....	1027	1,000	1,126	1,154	11,245	11,799
Class G average yarn numbers above 34.....	141,794	4,709	3,372	3,842	3,873
34 to 36.....	1028	141,794	4,709	3,372	3,842	3,873
36 to 38.....	1029	1,000	1,126	1,154	11,245	11,799
All other class "G" constructions.....	141,794	4,709	3,372	3,842	3,873
Under 42" wide.....	1028	141,794	4,709	3,372	3,842	3,873
42" and wider.....	1029	1,000	1,126	1,154	11,245	11,799
Class H average yarn numbers above 38.....	141,794	4,709	3,372	3,842	3,873
38 to 40.....	1030	141,794	4,709	3,372	3,842	3,873
40 to 42.....	1031	1,000	1,126	1,154	11,245	11,799
All other class "H" constructions.....	141,794	4,709	3,372	3,842	3,873
Under 42" wide.....	1030	141,794	4,709	3,372	3,842	3,873
42" and wider.....	1031	1,000	1,126	1,154	11,245	11,799
Class I average yarn numbers above 42.....	141,794	4,709	3,372	3,842	3,873
42 to 44.....	1032	141,794	4,709	3,372	3,842	3,873
44 to 46.....	1033	1,000	1,126	1,154	11,245	11,799
All other class "I" constructions.....	141,794	4,709	3,372	3,842	3,873
Under 42" wide.....	1032	141,794	4,709	3,372	3,842	3,873
42" and wider.....	1033	1,000	1,126	1,154	11,245	11,799
Class J average yarn numbers above 46.....	141,794	4,709	3,372	3,842	3,873
46 to 48.....	1034	141,794	4,709	3,372	3,842	3,873
48 to 50.....	1035	1,000	1,126	1,154	11,245	11,799
All other class "J" constructions.....	141,794	4,709	3,372	3,842	3,873
Under 42" wide.....	1034	141,794	4,709	3,372	3,842	3,873
42" and wider.....	1035	1,000	1,126	1,154	11,245	11,799
Class K average yarn numbers above 50.....	141,794	4,709	3,372	3,842	3,873
50 to 52.....	1036	141,794	4,709	3,372	3,842	3,873
52 to 54.....	1037	1,000	1,126	1,154	11,245	11,799
All other class "K" constructions.....	141,794	4,709	3,372	3,842	3,873
Under 42" wide.....	1036	141,794	4,709	3,372	3,842	3,873
42" and wider.....	1037	1,000	1,126	1,154	11,245	11,799
Class L average yarn numbers above 54.....	141,794	4,709	3,372	3,842	3,873
54 to 56.....	1038	141,794	4,709	3,372	3,842	3,873
56 to 58.....	1039	1,000	1,126	1,154	11,245	11,799
All other class "L" constructions.....	141,794	4,709	3,372	3,842	3,873

pins down data for counties

*Compiled by
the
Nation's
Fact Finder*

County Business Patterns highlights the data businessmen, market researchers, and industrial and civic planners need for counties, standard metropolitan statistical areas, and States. Principal data items covered are employment, taxable payrolls, and the number and employment-size of reporting units for commercial and industrial organizations. Data are presented in individual paper-bound reports for States and for the United States. Prices vary for individual reports. Computer tapes and punchcards are also available. For further information, write to Bureau of the Census, Washington, D.C., 20233, or any Department of Commerce field office.

Cotton Broad-Woven Goods

Dewey

First Quarter 1967

FOR RELEASE: August 30, 1967

SERIES: M22T.1(67)-1

The information contained in this report is collected on Census Form M22T. Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings at the same or nearby locations. In the tabulation of these reports, the production figures shown in tables 1 and 2 represent total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Table 1.--SUMMARY OF PRODUCTION, BY CLASS OF FABRIC

(Thousands of linear yards)

Type of goods	1967	1966
	Jan.-Mar. (preliminary)	Oct.-Dec. ^r
COTTON BROAD-WOVEN GOODS, TOTAL.....	2,214,493	2,175,424
Duck and allied fabrics.....	75,575	77,708
Sheeting and allied coarse and medium yarn fabrics.....	671,863	660,292
Print cloth yarn fabrics.....	770,679	742,724
Colored yarn fabrics.....	104,116	105,373
Towels, toweling, and dishcloths.....	167,583	163,180
Napped fabrics, blankets and blanketing.....	40,104	40,724
Fine cotton fabrics.....	267,201	270,230
Other woven cotton fabrics and specialties.....	117,372	115,193

^r Revised.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

For sale by the Bureau of the Census, Washington, D.C. 20233
Price 25 cents - \$1.00 per year

142-A. Cotton Broad-Woven Goods

Second Quarter 1967

Dewey

FOR RELEASE: October 5, 1967

SERIES: M22T.1(67)-2

Production of cotton broad-woven gray fabrics for the first half of 1967 was 5 percent below the comparable 1966 level and 2 percent more than the output for the last half of 1966. The aggregate for the second quarter of 1967 was 9 percent below previous quarter and 7 percent below the comparable quarter of last year.

Production of duck and allied fabrics increased 1 percent while all other fabric classes decreased. Print cloth fabrics were 12 percent below the previous quarter's level, while toweling decreased 11 percent, and fine cotton fabrics 10 percent. Other fabric classes showed decreases of from 4 to 8 percent.

COVERAGE—The figures included in this publication represent the entire known production of cotton broad-woven fabrics (over 12 inches in width). Estimates are included for all manufacturers whose reports were not received in time for tabulation.

The information is collected on quarterly report Form M22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings

at the same or nearby locations. In the tabulation of these reports, the production figures represent total production of the specified fabrics by all weaving mills regardless of their primary activity.

REVISION TO MILL ASSIGNMENT DATA—Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 relates to the entire activity of all mills primarily producing cotton fabrics. These data are not comparable with information shown for previous quarters because of the reclassification of particular mills whose primary activity is now the weaving of man-made fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the man-made fiber broad-woven goods report (M22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

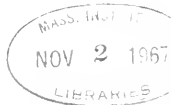

KNIT GOODS—Separate data on knit cloth are published by the Bureau of the Census in quarterly series M22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

Table 1.--SUMMARY OF PRODUCTION, BY CLASS OF FABRIC
(Thousands of linear yards)

Type of goods	1967	
	April-June (Preliminary)	Jan.-Mar. ¹
COTTON BROAD-WOVEN GOODS, TOTAL.....	2,136,483	2,222,606
Duck and allied fabrics.....	71,294	75,487
Sheeting and allied coarse and medium yarn fabrics.....	658,938	668,939
Print cloth yarn fabrics.....	730,389	776,964
Colored yarn fabrics.....	96,903	103,601
Towels, toweling, and dishcloths.....	161,184	166,316
Napped fabrics, blankets and blanketing.....	40,525	40,496
Fine cotton fabrics.....	257,452	268,168
Other woven cotton fabrics and specialties.....	119,798	122,635

¹Revised.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

For sale by the Bureau of the Census, Washington, D.C. 20233
Price 25 cents - \$1.00 per year

U.S. DEPARTMENT OF COMMERCE Alexander B. Trowbridge, Secretary
William H. Shaw, Assistant Secretary, Economic Affairs
BUREAU OF THE CENSUS A. Ross Eckler, Director

192-A Cotton Broad-Woven Goods Third Quarter 1967

FOR RELEASE: January 11, 1968

SERIES: M22T.1(67)-3

COVERAGE—The figures included in this publication represent the entire known production of cotton broad-woven fabrics (over 12 inches in width). Estimates are included for all manufacturers whose reports were not received in time for tabulation.

The information is collected on quarterly report Form M22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings at the same or nearby locations. In the tabulations of these reports, the production figures represent total production of the specified fabrics by all weaving mills regardless of their primary activity.

REVISION TO MILL ASSIGNMENT DATA—Information on loom hours, yarn consumption, and

stocks shown in tables 3, 4, and 5 relates to the entire activity of all mills primarily producing cotton fabrics. These data are not comparable with information shown for previous quarters because of the reclassification of particular mills whose primary activity is now the weaving of man-made fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the man-made fiber broad-woven goods report (M22T.2) for yarn consumed by type of mill, loom hours, and stocks are comparable.

KNIT GOODS—Separate data on knit cloth are published by the Bureau of the Census in quarterly series M22K. Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

Notes: In order to fill out the individual company information, a number of figures have been withheld. In such cases, a letter symbol has been substituted, as follows: * indicates the approximate magnitude of the withheld information.

Looms

- (a) Less than 100 looms
(b) 100 to 249 looms
(c) 250 to 499 looms
(d) 500 or more looms

Production

- (a) 100 to 4,000 linear yards
(b) 4,000 to 99,999 linear yards
(c) 1,000 to 2,499,999 linear yards
(d) 2,500,000 linear yards and over

- Represents the number of looms used in the second quarter of 1967.
 (D) Withheld to avoid disclosing figures for individual companies.

¹ Preliminary.

² Revised.

(C) Less than 1,000.

Current Industrial Reports
Change Sheet
Cotton Broad-Woven Goods
First Quarter 1966 To Third Quarter 1967

FOR RELEASE: January 26, 1968

SERIES: M22T.1

A review of the information published in this series has revealed some reporting errors of toweling and combed bed sheeting fabrics for selected fabric descriptions. The following changes should be made in this publication of M22T.1, Cotton Broad-Woven Goods, for the first quarter 1966 through the third quarter 1967. In addition, you should note in your review of these data that the significant revisions are indicated with an asterisk.

U.S. DEPARTMENT OF COMMERCE Alexander B. Trowbridge, Secretary
William H. Shaw, Assistant Secretary, Economic Affairs
BUREAU OF THE CENSUS A. Ross Eckler, Director

Cotton Broad-Woven Goods

Fourth Quarter 1967

FOR RELEASE: April 15, 1968

SERIES: M22T.1(67)-4

COVERAGE—The figures included in this publication represent the entire known production of cotton broad-woven fabrics (over 12 inches in width). Estimates are included for all manufacturers whose reports were not received in time for tabulation.

The information is collected on quarterly report Form M22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings at the same or nearby locations. In the tabulations of these reports, the production figures represent total production of the specified fabrics by all weaving mills regardless of their primary activity.

REVISION TO MILL ASSIGNMENT DATA—Information on loom hours, yarn consumption, and

stocks shown in tables 3, 4, and 5 relates to the entire activity of all mills primarily producing cotton fabrics. These data are not comparable with information shown for previous quarters because of the reclassification of particular mills whose primary activity is now the weaving of man-made fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the man-made fiber broad-woven goods report (M22T.2) for yarn consumed by type of mill, loom hours, and stocks are comparable.

KNIT GOODS—Separate data on knit cloth are published by the Bureau of the Census in quarterly series M22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

Note: In order to avoid disclosure of individual company information, a number of figures have been withheld. In such cases, a letter symbol has been substituted, as follows, to indicate the approximate magnitude of the withheld information.

Looms

- (aa) Less than 100 looms
(bb) 100 to 249 looms
(cc) 250 to 499 looms
(dd) 500 or more looms

Production

- (a) Less than 50 M linear yards
(b) 50 to 999 M linear yards
(c) 1,000 to 2,499 M linear yards
(d) 2,500 M linear yards and over

- Represents zero.

(D) Withheld to avoid disclosure of individual company data.

^a Preliminary.^b Revised.

Cotton Broadwoven Goods

Summary for 1967

FOR RELEASE: December 10, 1968

SERIES: MQ-22T.1(67)-5

The data shown in this report summarizes the information published in the quarterly M22T.1 series. Any revisions made to quarterly data previously published in this series are so noted.

DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series M22T.1 Cotton Broadwoven Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1966 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

COVERAGE

The information contained in this report is collected on Census quarterly form M22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified

fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

REVISION TO MILL ASSIGNMENT DATA

Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for previous years because of the 1967 reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods report (M22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series M22K. Ship-

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

ments of Knit Cloth, including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

DEFINITION OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is

classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Evelyn O. Denny, Chief, Textiles, assisted by Donald E. Burgess, was directly responsible for the review of the data and preparation of the report. Owen C. Gretton, Chief of the Division, and Milton Eisen, Assistant Chief, provided overall direction and coordination to this project.

Table 1. SUMMARY OF PRODUCTION, BY CLASS OF FABRIC: 1958 TO 1967

Cotton Broadwoven Goods

First Quarter 1968

FOR RELEASE: July 25, 1968

SERIES: MQ-22T.1(68)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1962 to 1968

(Millions of linear yards)

Quarter and year	Cotton broadwoven goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Colored yarn fabrics	Towels, toweling, and dishcloths	Mapped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census quarterly Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill although in some instances the "mill" reported as one unit to the Bureau of the Census constitutes two or more buildings at the same or nearby locations.

The current quarter's figures include estimates for manufacturers whose reports were not received in time for tabulation. Such estimates are based on quarter-to-quarter trends shown by reporting firms and are generally limited to a maximum of 5 percent for any one item. Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly
MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual

MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Present reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all

mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of manmade fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

Cotton Broadwoven Fabrics Average Weight and Width of Fabrics 1947 - First Quarter 1968

FOR RELEASE: November 29, 1968

SERIES: MQ-22T.1(68)-1 Supplement

SUMMARY OF FINDINGS

During the period from 1947 to the first quarter of 1968, the average width of cotton broadwoven fabrics increased 18 percent. In 1947 the average linear yard of cotton fabrics included 1.10 square yards of material. This ratio increased to 1.17 during the first quarter of 1958, to 1.22 during the first quarter of 1963, and to 1.30 during the first quarter of 1968.

The largest proportionate changes were reported for fine cotton fabrics and for toweling, washcloth, and dishcloth fabrics. In 1947 the average linear yard of fine cotton fabrics included 1.12 square yards of fabric; and by 1968 it had increased to 1.58 square yards per linear yard. For toweling, washcloth, and dishcloth fabrics, the ratio increased from .62 square yards per linear yard in 1947 to .88 square yards per linear yard in 1968.

With the increase in fabric widths, there was, as would be expected, an increase in the weight per linear yard. This is shown by the decline in the number of linear yards per pound of fabric produced. In 1947 a pound of fabric was equivalent of 3.30 linear yards. This declined to 3.16 in 1954; 3.09 in the first quarter 1958; 2.84 in the first quarter of 1963; and 2.61 in the first quarter of 1968.

With the changes in fabric widths and weights there have also been changes in the relative importance of individual constructions. One result of this has been that, on an overall basis, current cotton fabric production is heavier than in any of the previous periods surveyed. In 1947, 3.64 square yards of fabric weighed 1 pound. This was reduced to 3.61 square yards per pound in 1958; 3.48 in 1963; and 3.39 in 1968. However, the trend to heavier weights was not uniform for all fabrics, and the opposite movement occurred for some categories.

SURVEY AUTHORIZATION

The survey of fabric production in linear yards, square yards, and pounds for the first quarter of 1968 was conducted as part of the 1967 Census of Manufactures as authorized by an Act of Congress (13 United States Code). Data for earlier years were also collected as part of the censuses of manufactures for those years.

COVERAGE OF THE 1968 SURVEY

All respondents reporting in the Census quarterly broadwoven fabrics survey (Form MQ-22T) were included in the study of fabric weights and widths. Reports were received from manufacturers accounting for approximately 92 percent

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

William H. Chartener, Assistant Secretary for Economic Affairs
BUREAU OF THE CENSUS A. Ross Eckler, Director

of the first quarter 1968 production of cotton fabrics. Based on these reports, ratios of production of square yards and pounds to linear yards were computed for each of the fabrics shown in table 2. These ratios were then applied to the actual production data, in linear yards, to obtain estimates of the square yards and pounds of fabric produced. For all fabrics, the coverage ratios shown in table 2 indicate the percentage of the total production reported by respondents in this study for 1968. Individual figures for square yards and pounds are withheld when they are based on reports accounting for less than 50 percent of the total production.

The linear yards figures shown are from the Current Industrial Reports Series MQ-22T.1 (68)-2, Cotton Broadwoven Goods, Second Quarter 1968.

SEASONAL INFLUENCES

No analysis has been made of the effect on the 1968 data of seasonal influences which may have increased or decreased the production of specific fabrics during this period.

MANMADE FIBER AND WOOL FABRICS

Information regarding the relationship of linear yards to square yards and pounds of fabric production was also collected for manmade fiber and woolen and worsted fabrics. The report for woolen and worsted fabrics has been issued in Current Industrial Reports Series MQ-22T.3 (68)-1 Supplement, while the report for manmade fiber fabrics will be issued in Current Industrial Reports Series MQ-22T.2(68)-1 Supplement.

ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel Branch. Evelyn O. Denny, Chief, Textiles, assisted by Robert L. Gignilliat, was directly responsible for the review of the data and preparation of the report. Owen C. Gretton, Chief of the Division, and Milton Eisen, Assistant Chief, provided overall direction and coordination to this project.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. This detail figure is, however, included in the appropriate subtotals and totals. n.e.c. Not elsewhere classified. Revised.

¹Represents percentage of total linear yards accounted for by reports received in this survey.

²Data withheld because production information in square yards and pounds was reported by companies accounting for less than 50 percent of the total production.

Cotton Broadwoven Goods Second Quarter 1968

FOR RELEASE: September 25, 1968

SERIES: MQ-22T.1(68) -2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1962 to 1968

(Millions of linear yards)

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22C	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of Current Industrial Reports Series MQ-22T.1(68)-2

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

Current Data on U.S. Defense Activity

and its impact on the national economy

The principal time series on defense activity which influence short-term changes in the national economy are now available in a new monthly report from the Bureau of the Census.

Defense Indicators includes data on the following measures of defense activity:

- Obligations ■ Orders ■ Shipments ■ Employment
- Contracts ■ Expenditures ■ Inventories ■ Earnings

Recommended by an interagency committee established by the Bureau of the Budget, the new report presents data compiled by the Department of Defense, the Bureau of Labor Statistics, the Bureau of the Census, the Treasury Department, and the Office of Business Economics. With the exception of a few quarterly series, the measures are updated monthly.

The approximately 30 time series included are grouped in accordance with the time at which the activities they measure occur in the defense order-production-delivery process. The measures are presented graphically in three charts to facilitate interpretation:

- Comparison of National Defense Purchases with Total Gross National Product
- Advance Indicators of Defense Activity
- Intermediate and Final Indicators of Defense Activity

Analytical tables provide the original and seasonally adjusted basic data in monthly, quarterly, and annual form. Descriptions and definitions of the time series are also included.

Defense Indicators is available from the Superintendent of Documents, Government Printing Office, Washington, D.C., or any Department of Commerce field office, at \$4.50 per year.

CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Goods

Third Quarter 1968

FOR RELEASE: January 30, 1969

SERIES: MQ-22T.1(68)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1962 to 1968

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of Current Industrial Reports Series MQ-22T.1(68)-3

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

Here's a fast and easy way you can

- evaluate your current investments
- find new investment prospects
- relate your product to competitive areas
- measure industry performance

Growth Pace Setters in American Industry

This analysis by expert economists in the Business & Defense Services Administration of a selection of 55 fast growing industries gives you last minute statistics on: value of shipments, capital expenditures, foreign trade, geographic distribution, principal industry products, investment, wages per production worker, number of employees per establishment.

For only \$1.50 you get 186 pages packed with reliable analyses, tables, and charts. Pace Setters is your time-saving guide to growth factors and future prospects of U.S. industry. Send for your copies now. Return this special reservation.

Cotton Broadwoven Goods

Fourth Quarter 1968

FOR RELEASE: April 28, 1969

SERIES: MQ-22T.1(68)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1962 to 1968

(Millions of linear yards)

Quarter and year	Cotton broadwoven goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of Current Industrial Reports Series MQ-22T.1(68)-4

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

Cotton Broadwoven Goods Summary for 1968

OR RELEASE: December 24, 1969

SERIES: MQ-22T.1(68)-5

The data shown in this report summarizes the information published in the quarterly MQ-22T.1 series. Any revisions made to quarterly data previously published in this series are so noted.

DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series MQ-22T.1 Cotton Broadwoven Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1967 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified

fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

REVISION TO MILL ASSIGNMENT DATA

Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to 1967 because of the 1967 reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Ship-

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233. This publication is for sale by the Bureau of the Census, Price: 25 cents per copy—\$1.00 per year.

ments of Knit Cloth, including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

DEFINITIONS OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
MQ-22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
MQ-22T.1	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
MQ-22T.1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Evelyn O. Denny, Chief, Textiles, was directly responsible for the review of the data and preparation of the report. Owen C. Gretton, Chief of the Division, and Milton Eisen, Assistant Chief, provided overall direction and coordination to this project.

Table 1. SUMMARY OF PRODUCTION, BY CLASS OF FABRIC: 1959 TO 1968

(Millions of linear yards)

Year	Cotton broadwoven goods, total ¹	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Goods
First Quarter 1969

FOR RELEASE: August 4, 1969

SERIES: MQ-22T.1(69)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. **Summary of Production, by Class of Fabric: 1963 to 1969**

(Millions of linear yards)

Quarter and year	Cotton broadwoven goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1 (69)-1

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Goods Second Quarter 1969

FOR RELEASE: November 21, 1969

SERIES: MQ-22T.1(69)-2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit); Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Interiors--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

THE NATIONAL ECONOMIC GOAL

Sustained maximum growth in a free market economy, without inflation, under conditions of full employment and equal opportunity

THE DEPARTMENT OF COMMERCE

The historic mission of the Department is "to foster, promote and develop the foreign and domestic commerce" of the United States. This has evolved, as a result of legislative and administrative additions, to encompass broadly the responsibility to foster, serve and promote the nation's economic development and technological advancement. The Department seeks to fulfill this mission through these activities:

CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Goods

Third Quarter 1969

FOR RELEASE: February 16, 1970

SERIES: MQ-22T.1(69)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1963 to 1969

(Millions of linear yards)

Quarter and year	Cotton broadwoven goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

3 Imputation rate exceeds 50 percent.

* Revised figures for 1968 for cotton blanketing are shown in Current Industrial Report Series MQ-22T.11681-5, Cotton Broad-
woven Fabrics, Summary for 1968, page 6. However, first quarter figures shown in that report should read as follows: m. lin.
yds., Blanketing and other napped fabrics, total 37,535; thermal blanketing, 1,626; crib blanketing, including receiving
blankets, 2,063; and other blanketing, 5,249.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit); Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Sample, and Inter--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

1969 EDITION

Select an encyclopedia, add some information from an almanac, and still you have only a "fraction of the facts" to be found between the covers of the BRAND NEW 1969 Statistical Abstract of the United States. This book, one of the most widely-used reference volumes of government and private industry, includes both current data and historical trends on the social, economic, and governmental characteristics of the United States. The statistics appear in over 1,300 tables and charts, and come from over 200 government, private, and international agencies. The Guide to Sources in the Statistical Abstract lists over 800 statistical publications on 50 major subjects, including population, government, health, education, agriculture, industry, construction, recreation, trade, and scores of other subjects. Whoever you are, whatever your line of work, business, or profession—when you want the facts, you'll find them in the new Statistical Abstract of the United States, 1969.

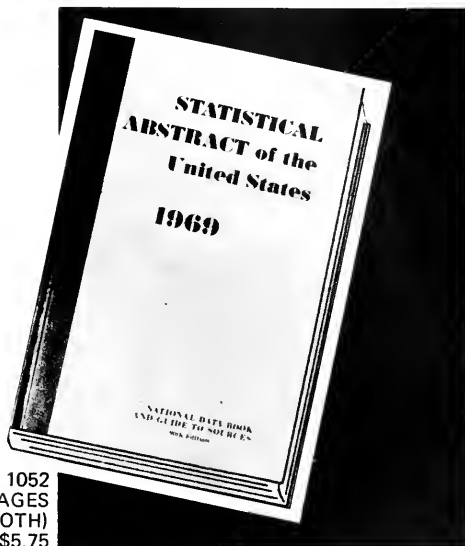

For complete urban information, the Abstract features an individual 60-page section of current data for over 200 metropolitan areas

CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Goods

Fourth Quarter 1969

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: March 31, 1970

SERIES: MQ-22T.1(69)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1963 to 1969

(Millions of linear yards)

Quarter and year	Cotton broadwoven goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, towelings, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of manmade fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

IT'S BRAND NEW!

To inform you about statistical data available from data files and special tabulations, the Census Bureau offers you the brand new. . .

Guide to Census Bureau Data Files and Special Tabulations outlines the programs and activities of the Census Bureau, describes the data files and special tabulations originating during the 1958-1968 period and currently available, offers information on how these materials may be obtained, defines the geographic areas for which the Census Bureau tabulates statistics, and includes descriptions of other unpublished materials such as computer programs.

Data files and special tabulations are available on the following subjects--

Agriculture
Construction
County and city data
Distribution and services
Retail trade
Wholesale trade
Selected services
Foreign trade
General economic statistics
Long Term Economic Growth
Business Conditions Digest
County Business Patterns
Geographic reports and maps
Governments Mineral industries
Housing Population
Manufacturing Transportation

A companion report, *Census Bureau Programs and Publications: Area and Subject Guide*, presents information on published data.

Information in the data files and special tabulations is subject to the same legal safeguards as printed reports to insure confidentiality. Census information about individual persons, households, farms, and business establishments, etc., cannot be disclosed; the files and tabulations will contain statistical summaries only.

CURRENT INDUSTRIAL REPORTS

Broadwoven Goods

Summary of Looms in Place

December 31, 1969

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: February 9, 1971

SERIES: MQ-22T(69) Supplement

The data shown in this report summarizes the information published in the quarterly MQ-22T series. No revisions have been made to data previously published.

Looms in place at broadwoven fabric mills at the end of 1969 totaled 370,907. Of the total number of looms in place, there were 360,878 in place at cotton and manmade fiber fabric mills, 7,853 in woolen and worsted mills and 2,176 at tire cord and tire fabric mills.

Coverage - Data are based on quarterly reports received on Census Form MQ-22T, Broad Fabrics (except knit): Woven, Nonwoven, and Felts. Estimates are included for respondents whose reports were not received in time for tabulation.

Beginning with first quarter 1969, these data, by type of mill, have been published separately on a quarterly basis in each of the Current Industrial Report Series MQ-22T (Cotton, Manmade, Wool, and Tire Cord).

LOOMS IN PLACE AT BROADWOVEN FABRIC MILLS, END OF 1969 AND 1968

Type of loom	Number in place, by type of mill ¹

CURRENT INDUSTRIAL REPORTS

GOVT. DOC.

Cotton Broadwoven Goods

Summary for 1969

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: November 16, 1970

SERIES: MQ-22T.1(69)-5

The data shown in this report summarize the information published in the quarterly MQ-22T.1 series. Any revisions made to quarterly data previously published in this series are so noted.

DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series MQ-22T.1 Cotton Broadwoven Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1968 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T. "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified

fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

DEFINITIONS OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
MQ-22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
MQ-22T.1	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
MQ-22T.1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Evelyn O. Denny, Chief, Textiles, assisted by Charles T. Lee, was directly responsible for the review of the data and preparation of the report. Owen C. Gretton, Chief of the Division, and Elmer S. Biles, Assistant Chief, provided overall direction and coordination to this project.

CURRENT INDUSTRIAL REPORTS

GOV. DOC.

Cotton Broadwoven Gray Goods
First Quarter 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: July 16, 1970

SERIES: MQ-22T.1(70)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1964 to 1970

(Millions of linear yards)

Quarter and year	Cotton broadwoven gray goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit); Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1(70)

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

THE NATIONAL ECONOMIC GOAL

Sustained maximum growth in a free market economy, without inflation, under conditions of full employment and equal opportunity

THE DEPARTMENT OF COMMERCE

The historic mission of the Department is "to foster, promote and develop the foreign and domestic commerce" of the United States. This has evolved, as a result of legislative and administrative additions, to encompass broadly the responsibility to foster, serve and promote the nation's economic development and technological advancement. The Department seeks to fulfill this mission through these activities:

MISSION AND FUNCTIONS OF THE DEPARTMENT OF COMMERCE

"to foster, serve and promote the nation's economic development and technological advancement"

Participating with other government agencies in the creation of national policy, through the President's Cabinet and its subdivisions.

- Cabinet Committee on Economic Policy
- Urban Affairs Council
- Environmental Quality Council

Promoting progressive business policies and growth.

- Business and Defense Services Administration
- Office of Field Services

Assisting states, communities and individuals toward economic progress.

- Economic Development Administration
- Regional Planning Commissions
- Office of Minority Business Enterprise

Strengthening the international economic position of the United States.

- Bureau of International Commerce
- Office of Foreign Commercial Services
- Office of Foreign Direct Investments
- United States Travel Service
- Maritime Administration

Assuring effective use and growth of the nation's scientific and technical resources.

- Environmental Science Services Administration
- Patent Office
- National Bureau of Standards
- Office of Telecommunications
- Office of State Technical Services

Acquiring, analyzing and disseminating information concerning the nation and the economy to help achieve increased social and economic benefit.

- Bureau of the Census
- Office of Business Economics

NOTE: This schematic is neither an organization chart nor a program outline for budget purposes. It is a general statement of the Department's mission in relation to the national goal of economic development.

CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Gray Goods
Second Quarter 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: October 20, 1970

SERIES: MQ-22T.1(70)-2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit); Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1(70)

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

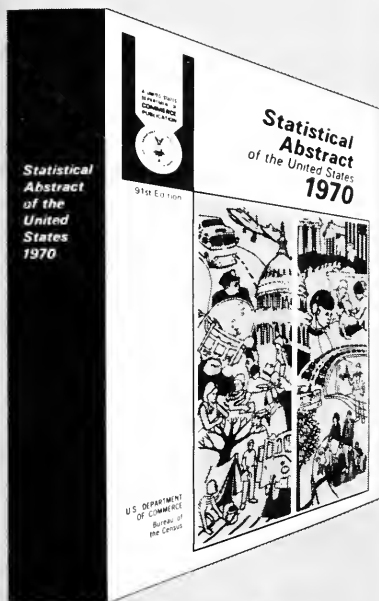

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

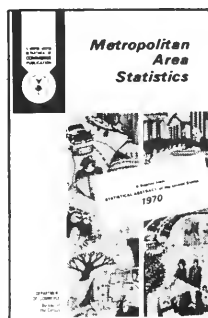

1970

... a NEW decade ... and a NEW LOOK for the 1970 STATISTICAL ABSTRACT OF THE UNITED STATES!

1042 Pages
(CLOTH) \$5.75

Between the covers of this 91st edition of the "Stat Abstract," as it is popularly known, are the Nation's most sought-after facts and figures in the world of government and private enterprise. Statesmen . . . businessmen . . . scientists . . . teachers and students alike FIND the information they want on the social, economic, and governmental characteristics of the United States — both current and historical. Statistics are presented in over 1,300 tables and charts derived from over 200 government, private, and international agencies. A special introductory table features RECENT TRENDS for selected measures of social and economic change. The GUIDE TO SOURCES lists over 800 statistical publications on 50 major subjects, such as population, government, health, education, agriculture, industry, construction, recreation, trade, and scores of other subjects. Whatever your line of work, business, profession, or avocational interests — when you need the facts, you want THE comprehensive and authoritative STATISTICAL ABSTRACT of the United States, 1970!

For users of urban information, the Abstract features an individual 66-page section of current data for over 200 metropolitan areas entitled, "Metropolitan Area Statistics." available as a separate reprint, priced at 35¢.

GOVT. DOC.

Cotton Broadwoven Gray Goods

Third Quarter 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: January 25, 1971

SERIES: MQ-22T.1(70)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1(70)

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

CURRENT POPULATION REPORTS

From the Bureau of the Census

P-23 SPECIAL STUDIES.

Infrequent reports on methods, concepts, or specialized data.

P-25 POPULATION ESTIMATES AND PROJECTIONS.

Monthly estimates of the total population of the United States; annual mid-year estimates of the population of States, by broad age groups, and of the United States by age, color, and sex; annual estimates of the components of population change. Estimates of the population selected metropolitan areas and their component counties. Projections of the future population of the United States and individual States. Approximately 20 reports each year.

P-26 FEDERAL-STATE COOPERATIVE PROGRAM FOR POPULATION ESTIMATES.

Population estimates for counties for selected States in which the figures are prepared by a State agency as part of the Federal-State Cooperative Program for Local Population Estimates.

P-27 FARM POPULATION.

(Census-ERS). Data on the size and selected characteristics of the farm population of the United States. Issued jointly with the Economic Research Service, U.S. Department of Agriculture. One or two reports each year.

P-28 SPECIAL CENSUSES.

Results of population censuses taken at the request and expense of city or other local governments. Subscription includes only the quarterly and annual summaries showing the total population figures for all the censuses conducted during the particular period. Individual reports issued for areas of 50,000 or more, showing the population by age, sex, and color are available separately. See "How to Order Reports." Five reports each year.

P-60 CONSUMER INCOME.

Information on the proportions of families and persons at various income levels. Also data on the relationship of income to age, sex, color, family size, education, occupation, work experience, and other characteristics. Two reports each year.

P-65 CONSUMER BUYING INDICATORS.

Information on the proportion of households reporting intentions to purchase automobiles, houses, and household equipment within a particular period of time. Also data on recent purchases. Quarterly.

HOW TO ORDER REPORTS

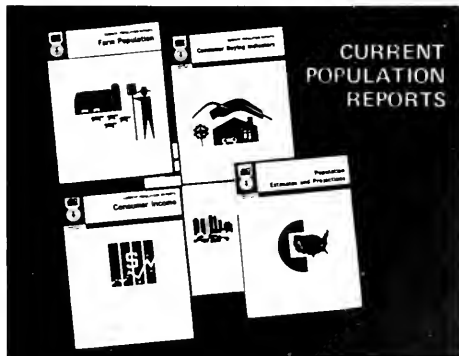

All Current Population Reports are sold as a single subscription for \$14.00 a year. This price includes Series P-20, P-23, P-25, P-26, P-27, P-28 (quarterly and annual summaries only), P-60, and P-65.

Subscriptions to individual series are not sold separately but single copies of reports issued in all series except P-28 may be obtained from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Individual city or area reports in the P-28 series may be ordered from the Bureau of the Census. Prices for these reports vary. For information on titles and prices of individual reports issued in all CPR series, write to Publications Distribution Section, Bureau of the Census, Washington, D.C. 20233.

P-20 POPULATION CHARACTERISTICS.

Current national and, in some cases, regional data on geographic residence and mobility, fertility, education, school enrollment, marital status, numbers and characteristics of household and families, etc. Approximately ten reports each year.

Mail order form with payment to:
Superintendent of Documents
U.S. Government Printing Office
Washington, D.C. 20402
or any U.S. Dept. of Commerce Field Office

Please send _____ subscription(s) of the Current Population Report Series as described above, at \$14.00 per subscription. (8 Series). Add \$3.50 for foreign mailing. C3.186: (Nos.)

CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Gray Goods Fourth Quarter 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: April 1, 1971

SERIES: MQ-22T.1(70)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1964 to 1970

(Millions of linear yards)

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit); Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1(70)

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

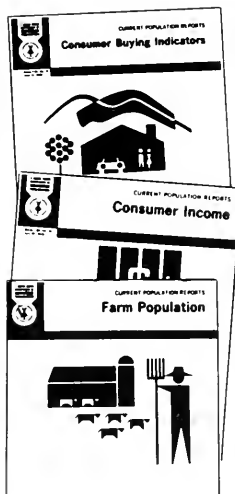

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

CURRENT POPULATION REPORTS

In addition to the findings of the Census of Population, conducted every ten years, the Bureau of the Census publishes continuing and up-to-date statistics on population counts, characteristics, and other special studies on the American people. Data are issued in the eight separate series of reports described herein and released under the general title, Current Population Reports.

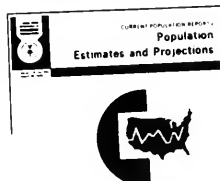

P-20 POPULATION CHARACTERISTICS.

Current national and, in some cases, regional data on geographic residence and mobility, fertility, education, school enrollment, marital status, numbers and characteristics of household and families, etc. Approximately ten reports each year.

P-23 SPECIAL STUDIES.

Infrequent reports on methods, concepts, or specialized data.

P-25 POPULATION ESTIMATES AND PROJECTIONS.

Monthly estimates of the total population of the United States; annual mid-year estimates of the population of States, by broad age groups, and of the United States by age, color, and sex; annual estimates of the components of population change. Estimates of the population selected metropolitan areas and their component counties. Projections of the future population of the United States and individual States. Approximately 20 reports each year.

P-26 FEDERAL-STATE COOPERATIVE PROGRAM FOR POPULATION ESTIMATES.

Population estimates for counties for selected States in which the figures are prepared by a State agency as part of the Federal-State Cooperative Program for Local Population Estimates.

P-27 FARM POPULATION.

(Census-ERS). Data on the size and selected characteristics of the farm population of the United States. Issued jointly with the Economic Research Service, U.S. Department of Agriculture. One or two reports each year.

P-28 SPECIAL CENSUSES.

Results of population censuses taken at the request and expense of city or other local governments. Subscription includes only the quarterly and annual summaries showing the total population figures for all the censuses conducted during the particular period. Individual reports issued for areas of 50,000 or more, showing the population by age, sex, and color are available separately. See "How to Order Reports." Five reports each year.

P-60 CONSUMER INCOME.

Information on the proportions of families and persons at various income levels. Also data on the relationship of income to age, sex, color, family size, education, occupation, work experience, and other characteristics. Two reports each year.

P-65 CONSUMER BUYING INDICATORS.

Information on the proportion of households reporting intentions to purchase automobiles, houses, and household equipment within a particular period of time. Also data on recent purchases. Quarterly.

HOW TO ORDER REPORTS

All Current Population Reports are sold as a single subscription for \$14.00 a year. This price includes Series P-20, P-23, P-25, P-26, P-27, P-28 (quarterly and annual summaries only), P-60, and P-65.

Subscriptions to individual series are not sold separately but single copies of reports issued in all series except P-28 may be obtained from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Individual city or area reports in the P-28 series may be ordered from the Bureau of the Census. Prices for these reports vary. For information on titles and prices of individual reports issued in all CPR series, write to Publications Distribution Section, Bureau of the Census, Washington, D.C. 20233.

Summary of Looms in Place

December 31, 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

November 1971

SERIES: MQ-22T(70) Supplement

The data shown in this report summarizes the information published in the quarterly MQ-22T series. No revisions have been made to data previously published.

Looms in place at broadwoven fabric mills at the end of 1970 totaled 362,558. Of the total number of looms in place, there were 352,984 in place at cotton and manmade fiber fabric mills, 7,257 in woolen and worsted mills and 2,317 at tire cord and tire fabric mills.

Coverage - Data are based on quarterly reports received on Census Form MQ-22T, Broad Fabrics (except knit): Woven, Nonwoven, and Felts. Estimates are included for respondents whose reports were not received in time for tabulation.

Beginning with first quarter 1969, these data, by type of mill, have been published separately on a quarterly basis in each of the Current Industrial Report Series MQ-22T (Cotton, Manmade, Wool, and Tire Cord).

- Represents zero.

¹Mill classification is determined by the primary type of fabric produced by the establishment. This assignment is based on their output in 1967.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233. This publication is for sale by the Bureau of the Census, Price: 25 cents per copy.

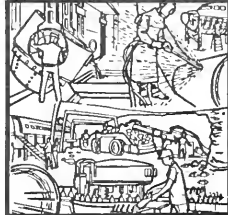

Cotton Broadwoven Goods

Summary for 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

SERIES: MQ-22T.1(70)-5

The data for production of blanketing as reported in table 1, page 2 and table 2, page 6 of the 1970 summary released on September 29, 1971 and the 1969 summary released on November 16, 1970 for Current Industrial Reports Series MQ22T.1, Cotton Broadwoven Goods, should be revised to read as indicated below.

MQ-22T.1(70)-5

CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Gray Goods

Summary for 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: September 29, 1971

SERIES: MQ-22T.1(70)-5

The data shown in this report summarize the information published in the quarterly MQ-22T.1 series. Any revisions made to quarterly data previously published in this series are so noted.

DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series MQ-22T.1 Cotton Broadwoven Gray Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1969 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified

fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

WOOLEN AND WORSTED MILLS

Mills with woollen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Shipments of Knit Cloth, including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

DEFINITION OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

Series	Title	Period Covered
MQ-22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
MQ-22T.1	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
MQ-22T.1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Charles T. Lee was directly responsible for the review of the data and preparation of the report. Owen C. Gretton, Chief of the Division, and Elmer S. Biles, Assistant Chief, provided overall direction and coordination to this project.

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

CURRENT INDUSTRIAL REPORTS

Broadwoven Gray Fabric Production

Seasonal Adjustment Supplement

1950 to 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: June 18, 1971

SERIES: MQ-22T Supplement

This report presents seasonally adjusted data for a number of the product class aggregates published quarterly in Current Industrial Reports Series MQ-22T, Broadwoven Fabrics. The seasonal adjustment program largely eliminates the effect of normal seasonal variations (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

The seasonal adjustments were made using the X-11Q variant of the Census Bureau's seasonal adjustment program. This program is amply described in the literature on this method.¹

For each series included in this report the following tables are shown:

- (1) Seasonally-adjusted data
- (2) Data without seasonal adjustment (original series)
- (3) Seasonal adjustment factors. The seasonally-adjusted data are obtained by dividing the unadjusted data by the seasonal factors for the specific month
- (4) Average percentage changes and related measures for each series.

¹Electronic Computers and Business Indicators, National Bureau of Economic Research Occasional Paper 57 New York, 1957; Tests and Revisions of Bureau of the Census Methods of Seasonal Adjustments, Bureau of the Census Technical Paper No. 5 (Washington, 1961, \$1.00); The X-11 Variant of the Census Method 11 Seasonal Adjustment Program, Bureau of the Census Technical Paper No. 15 (Washington, 1967, \$0.50).

Beginning with the second quarter 1971 publication, adjusted data will be included in each of the regular MQ-22T reports. These reports also include a detailed description of the survey, including a discussion of the scope and coverage of the report together with an explanation of the terms.

BRIEF DEFINITIONS OF MEASURES SHOWN
IN TABLE 4

The following are brief definitions; more complete explanations appear in Electronic Computers and Business Indicators, by Julius Shiskin, issued as Occasional Paper 57 by the National Bureau of Economic Research, 1957 (reprinted from Journal of Business, October 1957).

"CI" is the average quarter-to-quarter percentage change, without regard to sign, in the seasonally adjusted series (i.e., the series after adjustment for measurable seasonal, trading-day, and holiday variations).

"I" is the same for the irregular component, obtained by dividing the cyclical component into the seasonally adjusted series.

"C" is the same for the cyclical component, a smooth, flexible moving average of the seasonally adjusted series.

"1/C" is a measure of the relative smoothness (small values) or irregularity (large values) of the seasonally adjusted series.

"QCD" (quarters for cyclical dominance) provides an estimate of the appropriate time span over which to observe cyclical movements in a quarterly series. It is small for smooth series and large for irregular series.

"Average Duration of Run" (ADR) is another measure of smoothness and is equal to the average

number of consecutive quarterly changes in the same direction in any series of observations. The ADR is shown for the seasonally adjusted series C1, irregular component I, cyclical component C, and the QCD curve. The QCD curve is an unweighted moving average (with the number of terms equal to QCD) of the seasonally adjusted series.

CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Gray Goods

First Quarter 1971

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: June 23, 1971

SERIES: MQ-22T.1(71)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1(71)

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

1971 edition Statistical Classification of Domestic and Foreign
Commodities Exported from the United States

schedule B

The Bureau of the Census Offers. . .

a new and improved edition of Schedule B,
Statistical Classification of Domestic and Foreign
Commodities Exported from the United
States. Shown in this 1971 edition are current
Schedule B commodity classification code numbers
required on Shipper's Export Declarations.

Numerous improvements over the 1965 Schedule B are included in this new issue by the addition, deletion, and revision of headnotes, directives, and inclusion item listings, and by the rewording of commodity descriptions. These changes facilitate the use of Schedule B, largely through clarification of the coverage of individual Schedule B numbers...however, the basic outline and arrangement of the 1971 Schedule is the same used in the 1965 edition. The new '71 edition also contains revised procedures for reporting quantities on the Shipper's Export Declarations for those Schedule B numbers requiring the quantity to be shown in two units.

Another innovation in the 1971 Schedule B is an updated and improved **alphabetical commodity index** expanded to cover a larger number of individual items. Also - the basic format of the index is revised to show the first five digits of the seven digit commodity number for each indexed item, rather than showing a page number for each indexed item.

You may order your 1971 edition of Schedule B from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 (fill out order form below); from the local Collector of Customs; or from any U.S. Department of Commerce Field Office.

528 pp. \$10.50 (\$2.75 additional for foreign mailing). This price includes supplemental changes issued irregularly for an indefinite period.

Cotton Broadwoven Gray Goods

Second Quarter 1971

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: September 21, 1971

SERIES: MQ-22T.1(71)-2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics. Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1/71

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows;

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

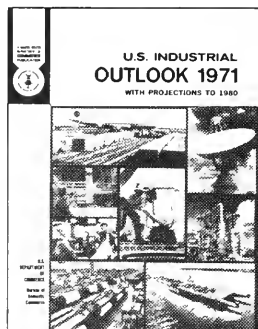

Advance knowledge of what's coming 1972-1980

is yours with the **U.S. INDUSTRIAL OUTLOOK**
and **The Economy At Midyear, 1971**

With your own personal copies you will quickly see where business is headed, where your industry—and your own personal business situation—stands in relation to the nation's economy.

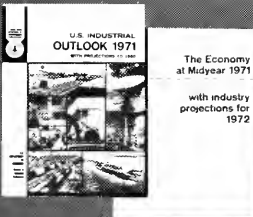

These timely forecasts pinpoint prospects for over 200 specific industries. Each industry chapter brings you just the data you need for long-range planning—a narrative review of activity in '70 with dependable forecasts for '75 and '80 projected by experienced Commerce Department industry specialists.

Yes, before you make your next business decision you'll want to read the authoritative U.S. Industrial Outlook, 1971, and The Economy at Midyear, 1971, with up-to-date statistics on—value of shipments . . . profits . . . number of firms . . . employment . . . imports/exports . . . prices . . . products . . . geographic concentration . . . innovations . . . pollution problems . . . new markets . . . financial data . . . R&D costs . . . and rates of investment.

Cotton Broadwoven Gray Goods

Third Quarter 1971

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

December 1971

SERIES: MQ-22T.1(71)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except is follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

CURRENT POPULATION REPORTS

From the Bureau of the Census

P-23 SPECIAL STUDIES.
Infrequent reports on methods, concepts, or specialized data.

In addition to the findings of the Census of Population, conducted every ten years, the Bureau of the Census publishes continuing and up-to-date statistics on population counts, characteristics, and other special studies on the American people. Data are issued in the eight separate series of reports described herein and released under the general title, Current Population Reports.

P-20 POPULATION CHARACTERISTICS.

Current national and, in some cases, regional data on geographic residence and mobility, fertility, education, school enrollment, marital status, numbers and characteristics of household and families, etc. Approximately ten reports each year.

P-25 POPULATION ESTIMATES AND PROJECTIONS.

Monthly estimates of the total population of the United States; annual mid-year estimates of the population of States, by broad age groups, and of the United States by age, color, and sex; annual estimates of the components of population change. Estimates of the population selected metropolitan areas and their component counties. Projections of the future population of the United States and individual States. Approximately 20 reports each year.

P-26 FEDERAL-STATE COOPERATIVE PROGRAM FOR POPULATION ESTIMATES.

Population estimates for counties for selected States in which the figures are prepared by a State agency as part of the Federal-State Cooperative Program for Local Population Estimates.

P-27 FARM POPULATION.

(Census-ERS). Data on the size and selected characteristics of the farm population of the United States. Issued jointly with the Economic Research Service, U.S. Department of Agriculture. One or two reports each year.

P-28 SPECIAL CENSUSES.

Results of population censuses taken at the request and expense of city or other local governments. Subscription includes only the quarterly and annual summaries showing the total population figures for all the censuses conducted during the particular period. Individual reports issued for areas of 50,000 or more, showing the population by age, sex, and color are available separately. See "How to Order Reports." Five reports each year.

P-60 CONSUMER INCOME.

Information on the proportions of families and persons at various income levels. Also data on the relationship of income to age, sex, color, family size, education, occupation, work experience, and other characteristics. Two reports each year.

P-65 CONSUMER BUYING INDICATORS.

Information on the proportion of households reporting intentions to purchase automobiles, houses, and household equipment within a particular period of time. Also data on recent purchases. Quarterly.

HOW TO ORDER REPORTS

All Current Population Reports are sold as a single subscription for \$14.00 a year. This price includes Series P-20, P-23, P-25, P-26, P-27, P-28 (quarterly and annual summaries only), P-60, and P-65.

Subscriptions to individual series are not sold separately but single copies of reports issued in all series except P-28 may be obtained from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Individual city or area reports in the P-28 series may be ordered from the Bureau of the Census. Prices for these reports vary. For information on titles and prices of individual reports issued in all CPR series, write to Publications Distribution Section, Bureau of the Census, Washington, D.C. 20233.

Cotton Broadwoven Gray Goods

Fourth Quarter 1971

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

March 1972

SERIES: MQ-22T.1(71)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for respondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except is follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

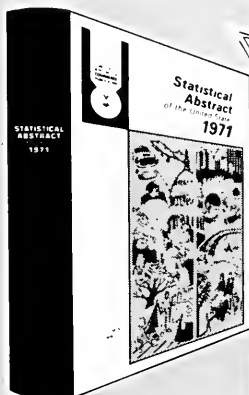

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

The Census Bureau presents

The Statistical Abstract of the United States — 1971

The U.S. Department of Commerce, Bureau of the Census presents the **1971 STATISTICAL ABSTRACT OF THE UNITED STATES**. This 92d edition of the "Stat Abstract," as it is popularly known, offers the Nation's most sought-after facts and figures in the world of government and private enterprise. Statesmen...businessmen...scientists... teachers and students alike **FIND** the information they want **on** the social, economic, and governmental characteristics of the United States - both current and historical. Statistics are presented in over 1,300 tables and charts derived from over 200 government, private, and international agencies. A special introductory table features **RECENT TRENDS** for selected measures of social and economic change. The **GUIDE TO SOURCES** lists over 800 statistical publications on 50 major subjects, such as population (including data from the 1970 Census of Population and Housing), government, health, education, agriculture, industry, construction, recreation, trade, and scores of other subjects. Whatever your line of work, business, profession, or avocational interests - when you need the facts, choose the comprehensive and authoritative **STATISTICAL ABSTRACT OF THE UNITED STATES, 1971**.

October 1972

SERIES: MQ-22T(71) Supplement

The data shown in this report summarize the information published in the quarterly MQ-22T series. No revisions have been made to data previously published.

Looms in place at broadwoven fabric mills, at the end of 1971 totaled 343,022. Of the total number of looms in place, there were 335,177 in place at cotton and manmade fiber fabric mills 5,566 in woolen and worsted mills and 2,279 at tire cord and tire fabric mills.

Coverage - Data are based on quarterly reports received on Census Form MQ-22T, Broad Fabrics (except knit): Woven, Nonwoven, and Felts. Estimates are included for respondents whose reports were not received in time for tabulation.

Beginning with first quarter 1969, these data, by type of mill, have been published separately on a quarterly basis in each of the Current Industrial Report Series MQ-22T (Cotton, Manmade, Wool, and Tire Cord).

- Represents zero.

¹Mill classification is determined by the primary type of fabric produced by the establishment. This assignment is based on their output in 1967.

CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Gray Goods

Summary for 1971

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

September 1972

SERIES: MQ-22T.1(71)-5

The data shown in this report summarize the information published in the quarterly MQ-22T.1 series. Any revisions made to quarterly data previously published in this series are so noted.

DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series MQ-22T.1 Cotton Broadwoven Gray Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1970 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified

fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

DEFINITION OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

Series	Title	Period Covered
MQ-22T Supp.	Broadwoven Fabrics-- Blends and Mixtures	1965
MQ-22T.1	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Man- made Fiber, and Wool Fabrics)	First Quarter 1968
MQ-22T.1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Charles T. Lee was directly responsible for the review of the data and preparation of the report. Elmer S. Biles, Chief of the Division, and Louis J. Owen, Acting Assistant Division Chief of Commodity and Industry Programs, provided overall direction and coordination to this project.

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Cotton Broadwoven Gray Goods

First Quarter 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

June 1972

SERIES: MQ-22T.1(72)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

The Census Bureau presents

The Statistical Abstract of the United States—1971

The U.S. Department of Commerce, Bureau of the Census presents the **1971 STATISTICAL ABSTRACT OF THE UNITED STATES**. This 92d edition of the "Stat Abstract," as it is popularly known, offers the Nation's most sought-after facts and figures in the world of government and private enterprise. Statesmen...businessmen...scientists...teachers and students alike **FIND** the information they want on the social, economic, and governmental characteristics of the United States - both current and historical. Statistics are presented in over 1,300 tables and charts derived from over 200 government, private, and international agencies. A special introductory table features **RECENT TRENDS** for selected measures of social and economic change. The **GUIDE TO SOURCES** lists over 800 statistical publications on 50 major subjects, such as population (including data from the 1970 Census of Population and Housing), government, health, education, agriculture, industry, construction, recreation, trade, and scores of other subjects. Whatever your line of work, business, profession, or avocational interests - when you need the facts, choose the comprehensive and authoritative **STATISTICAL ABSTRACT OF THE UNITED STATES, 1971**.

Cotton Broadwoven Fabrics Weight and Width of Fabrics

1954-First Quarter 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

November 1972

SERIES: MQ-22T.1(72)-1 Supplement

SUMMARY OF FINDINGS

During the period from 1968 to the first quarter of 1972, the average width of cotton broadwoven fabrics increased 18 percent. In 1968 the average linear yard of cotton fabrics included 1.30 square yards of material. This ratio decreased to 1.28 during the first quarter of 1972.

SURVEY AUTHORIZATION

The survey of fabric production in linear yards, square yards, and pounds for the first quarter of 1972 was conducted as part of the 1972 Census of Manufactures as authorized by an Act of Congress (13 United States Code). Data for earlier years were also collected as part of the censuses of manufactures for those years.

COVERAGE OF THE 1972 SURVEY

All respondents reporting in the Census quarterly broadwoven fabrics survey (Form MQ-22T) were included in the study of fabric weights and widths. Reports were received from manufacturers accounting for approximately 91 percent of the first quarter 1972 production of cotton fabrics. Based on these reports, ratios of production of square yards and pounds to linear yards were computed for each of the fabrics shown in table 2. These ratios were then applied to the actual production data, in linear yards, to obtain estimates of the square yards and pounds of fabric produced. For all fabrics, the coverage ratios shown in table 2 indicate the percentage of the total production reported by respondents in this study for 1972. Individual figures for square yards and pounds are withheld when they are based on reports accounting for less than 50 percent of the total production.

The linear yards figures shown are from the Current Industrial Reports Series MQ-22T.1 (72)-2, Cotton Broadwoven Goods, Second Quarter 1972.

SEASONAL INFLUENCES

No analysis has been made of the effect on the 1972 data of seasonal influences which may have increased or decreased the production of specific fabrics during this period.

MANMADE FIBER AND WOOL FABRICS

Information regarding the relationship of linear yards to square yards and pounds of fabric production was also collected for manmade fiber and woolen and worsted fabrics. The report for woolen and worsted fabrics has been issued in Current Industrial Reports Series MQ-22T.3 (72)-1 Supplement, while the report for manmade fiber fabrics will be issued in Current Industrial Reports Series MQ-22T.2(72)-1 Supplement.

ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel Branch. Charles T. Lee, Jr., John E. Matthews, Jr., and Katie Rangos were directly responsible for the review of the data and preparation of the report. Elmer S. Biles, Chief of the Division, and Louis J. Owen, Assistant Division Chief of Commodity and Industry Programs, provided overall direction and coordination to this project.

Cotton Broadwoven Gray Goods

Second Quarter 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

September 1972

SERIES: MQ-22T.1(72)2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

Table 1A.--Summary of Seasonally Adjusted Production Data, by Class of Fabric:

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T,5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T,1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

UP-TO-DATE BUSINESS REPORTS

Current Reports on Retail Trade

***Weekly Retail Sales**—Estimates of weekly retail sales for the United States for selected major kind-of-business groups, including figures for the comparable weeks in the previous year. Issued each Thursday.

***Monthly Retail Trade Report**—Estimates of monthly retail sales for the United States by major kind-of-business groups and selected individual kinds of business; separate figures shown, in more limited kind-of-business detail, for firms operating 11 or more retail stores. Summary sales data presented for geographic regions and divisions, and for 15 large States, the 20 large standard metropolitan statistical areas and the five largest cities. Also included are national estimates of end-of-month accounts receivable balances for retail stores.

***Annual Retail Trade Report**—Estimates of inventories held by retailers in the United States by major kind-of-business groups and selected individual kinds of business. Separate figures shown in more limited kind-of-business detail for firms operating 11 or more retail stores. Also shown are sales-inventory ratios as well as per capita sales, by kind-of-business for the United States, by major kind-

of-business groups for geographic regions, and summary figures for geographic divisions and for the larger States and standard metropolitan statistical areas.

***Advance Monthly Retail Sales**—Advance estimates of monthly retail sales for the United States (including data adjusted for seasonal variations and trading day differences) are compiled by major kind-of-business groups about 10 days after the month covered. Publication of this series has been temporarily suspended but unofficial estimates may be obtained from the Business Division of the Bureau of the Census.

†Monthly Department Store Sales for Selected Areas—Monthly dollar sales volume and the percent change in sales compared with the previous month and the same month in the previous year. Cumulative year-to-date comparisons with data for the previous year are also shown. Data are collected in about 200 standard metropolitan statistical areas, cities, and other areas.

Selected Services Trade

†Monthly Selected Services Receipts—This report provides data on monthly receipts of six major kind-of-business groups of services: Hotels,

motels, tourist courts, trailer parks, and camps; personal services; business services; automotive services; miscellaneous repair services; and motion picture, amusement, and recreation services. Comparable data for the previous months and for the same month in the previous year are also shown, in addition to the percent changes. Data are shown both unadjusted and adjusted for seasonal variations and trading day differences.

Wholesale Trade

***Monthly Wholesale Trade Report**—This report includes estimated dollar sales, end-of-month inventories, and stock-sales ratios of merchant wholesalers, by kind of business for the current month, with comparisons for previous months. Dollar volume sales estimates are shown by geographic division in total and for durable and non-durable kind-of-business subtotals. Sales and inventory trends (percent changes) are shown by detailed kinds of business at the national level and for selected kinds of businesses by geographic division. Measures of sampling variability are given. United States data are shown adjusted for seasonal variations and in the case of sales, also for trading-day differences.

Other Business Reports

†Canned Food Report—This report is issued on five dates—January 1, April 1, June 1, July 1, and November 1—to show total stocks of wholesale distributors and canners, including warehouses of retail multiunit organizations, of selected canned food items (vegetables, fruits, juices, fish). In the January 1 report, separate data are shown for the No. 10 can size as well as for warehouse stocks of retail multiunit organizations.

†Green Coffee Inventories and Roastings—This quarterly report provides estimates of green coffee inventories held by roasters, importers, and dealers, the quantity of green coffee roasted, and the amount roasted for soluble use, by quarters, for the current and previous three years. Also included are quarterly imports of green coffee during the same period.

***Available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.**

†Available from the Bureau of the Census, Washington, D.C. 20233

Cotton Broadwoven Gray Goods

Third Quarter 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

December 1972

SERIES: MQ-22T.1(72)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

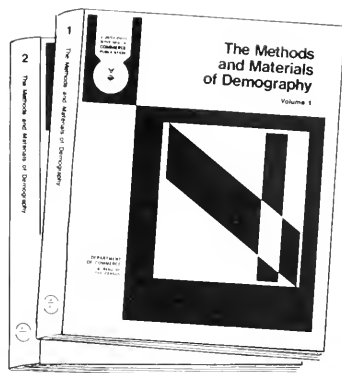

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

The Methods and Materials of Demography

These two volumes offer a systematic and comprehensive exposition, with illustrations, of the methods currently used by technicians and research workers in dealing with demographic data. They are intended to serve both as texts for courses in demographic methods and as references for professional workers who use population data. The publications deal with the sources, limitations, underlying definitions, and bases of classification of demographic data, as well as with techniques and methods that have been developed for summarizing and analyzing them.

Topics covered include formal demography and the study of many social and economic characteristics of the population.

The derivation of the demographic measures described is usually illustrated in step-by-step examples using actual statistics, drawn from a wide range of geographic areas, both in the United States and abroad. Considerable emphasis is placed on the kinds of data available for statistically underdeveloped areas, as well as on the special methods applicable to these areas.

At the same time, the materials of the United States are covered in great detail, especially with respect to sources, definitions, and historical developments. Plans for the enumeration, processing, and tabulation of the 1970 Census of the United States are included. The methodological material is presented in the simplest mathematical form and, for the most part, a knowledge of advanced mathematics is not required. The volumes benefit from the contribution of a number of specialists who participated as associate authors.

The two-volume book consists of about 26 subject chapters and three appendices of reference tables, covering approximately 900 pages. It is printed in the large format of decennial census reports and bound in vellum.

The following is a list of some of the subjects treated and reflects the scope of the work:

- Basic sources of demographic statistics
- Collection and processing of demographic data
- Population size and distribution
- Sex and age composition
- Racial and ethnic composition
- Marital characteristics and family groups
- Educational and economic characteristics
- Mortality and the life table
- Natality
- Reproductivity
- Marriage and divorce
- International migration, internal migration, and short-distance mobility
- Population estimates and projections
- Methods of estimation for statistically underdeveloped areas.

The preparation of the book was supported in part by the Office of Population, U.S. Agency for International Development.

The principal authors are Henry S. Shryock, formerly Assistant Chief, Population Division, U.S. Bureau of the Census, and Jacob S. Siegel, Staff Assistant for Program Development, Population Division.

Cotton Broadwoven Gray Goods

Fourth Quarter 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

March 1973

SERIES: MO-22T.1(72)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data -- Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

Cotton Broadwoven Gray Goods

Summary for 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

June 1973

SERIES: MQ-22T.1(72)-5

The data shown in this report summarize the information published in the quarterly MQ-22T.1 series. Any revisions made to quarterly data previously published in this series are so noted.

DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series MQ-22T.1 Cotton Broadwoven Gray Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1971 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified

fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

DEFINITION OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
MQ-22T Supp.	Broadwoven Fabrics-- Blends and Mixtures	1965
MQ-22T.1	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
MQ-22T.1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Charles T. Lee was directly responsible for the review of the data and preparation of the report. Elmer S. Biles, Chief of the Division, and Louis J. Owen, Assistant Division Chief for Commodity and Industry Programs, provided overall direction and coordination to this project.

Summary of Looms in Place

December 31, 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

August 1973

SERIES: MQ-22T(72)-Supplement

The data shown in this report summarize the information published in the quarterly MQ-22T series. No revisions have been made to data previously published.

Looms in place at broadwoven fabric mills, at the end of 1972 totaled 332,072. Of the total number of looms in place, there were 326,585 in place at cotton and manmade fiber fabric mills 3,611 in woolen and worsted mills and 1,876 at tire cord and tire fabric mills.

Coverage - Data are based on quarterly reports received on Census Form MQ-22T, Broad Fabrics (except knit): Woven, Nonwoven, and Felts. Estimates are included for respondents whose reports were not received in time for tabulation.

Beginning with first quarter 1969, these data, by type of mill, have been published separately on a quarterly basis in each of the Current Industrial Report Series MQ-22T (Cotton, Manmade, Wool, and Tire Cord).

LOOMS IN PLACE AT BROADWOVEN FABRIC MILLS, END OF 1972 AND 1971

Type of loom	Number in place, by type of mill ¹

Pile and Jacquard looms.....		6,248	5,747		
Shuttleless looms and weaving machines.	10,243	4,443	3,839	1,961	-

- Represents zero.

¹Mill classification is determined by the primary type of fabric produced by the establishment.

The assignment for 1972 is based on data reported for 1972 on the MQ-22T, Broadwoven Fabric (Gray) whereas the assignment for 1971 is based on their output in 1967.

Seasonal Adjustment Supplement

1968 to 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

October 1973

SERIES: MQ-22T Supplement

This report presents seasonally adjusted data for the years 1968 to 1972 for a number of the product class aggregates published quarterly in Current Industrial Reports Series MQ-22T, Broadwoven Fabrics. The data for the years 1950 to 1967 were excluded from this publication because there were no significant changes. The data for the years 1950 to 1967 are available in the MQ-22T Seasonal Adjustment Supplement published on June 18, 1971.

SEASONAL ADJUSTMENTS

The seasonal adjustment program largely eliminates the effect of normal seasonal variations (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of quarter-to-quarter variations, which are due to factors unassociated with a repetitive seasonal pattern.

The seasonal adjustments were made using the X-11Q variant of the Census Bureau's seasonal adjustment program. This program is amply described in the literature on this method.¹

For each series included in this report the following tables are shown:

¹Electronic Computers and Business Indicators, National Bureau of Economic Research Occasional Paper 57 (New York, 1957); Tests and Revisions of Bureau of the Census Methods of Seasonal Adjustments, Bureau of the Census Technical Paper No. 5 (Washington, 1961, \$1.00); The X-11 Variant of the Census Method II Seasonal Adjustment Program, Bureau of the Census Technical Paper No. 15 (Washington, 1967, \$0.50).

- (1) Seasonally-adjusted data
- (2) Data without seasonal adjustment (original series)
- (3) Seasonal adjustment factors. The seasonally-adjusted data are obtained by dividing the unadjusted data by the seasonal factors for the specific month
- (4) Average percentage changes and related measures for each series.

DEFINITIONS

The symbols and terms used in table 4 are briefly defined here; more complete explanations appear in Electronic Computers and Business Indicators, by Julius Shiskin, issued as Occasional Paper 57 by the National Bureau of Economic Research, 1957 (reprinted from Journal of Business, October 1957).

" $\tilde{C}I$ " is the average quarter-to-quarter percentage change, without regard to sign, in the seasonally adjusted series (i.e., the series after adjustment for measurable seasonal, trading-day, and holiday variations).

" \tilde{I} " is the same for the irregular component, obtained by dividing the cyclical component into the seasonally adjusted series.

" \tilde{C} " is the same for the cyclical component, a smooth, flexible moving average of the seasonally adjusted series.

" $\tilde{1}/\tilde{C}$ " is a measure of the relative smoothness (small values) or irregularity (large values) of the seasonally adjusted series.

"QCD" (quarters for cyclical dominance) provides an estimate of the appropriate time span over which to observe cyclical movements in a quarterly series. It is small for smooth series and large for irregular series.

"Average Duration of Run" (ADR) is another measure of smoothness and is equal to the average

number of consecutive quarterly changes in the same direction in any series of observations. The ADR is shown for the seasonally adjusted series C1, irregular component I, cyclical component C, and the QCD curve. The QCD curve is an unweighted moving average (with the number of terms equal to QCD) of the seasonally adjusted series.

(NA) Not available.

Includes data for "Chiefly Nylon Filament Yarn Fabric" and "All Other Filament Yarn Fabrics" which are not shown separately.

CURRENT POPULATION REPORTS

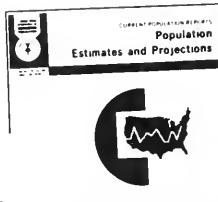

In addition to the findings of the Census of Population, conducted every 10 years, the Bureau of the Census publishes continuing and up-to-date statistics on population counts, characteristics, and other special studies on the American people. Data are issued in the eight separate series of reports described herein and released under the general title, Current Population Reports.

P-20 POPULATION CHARACTERISTICS.

Current national and, in some cases, regional data on geographic residence and mobility, fertility, education, school enrollment, marital status, numbers and characteristics of household and families, etc. Approximately 10 reports each year.

P-23 SPECIAL STUDIES. Infrequent reports on methods, concepts, or specialized data.

P-25 POPULATION ESTIMATES AND PROJECTIONS.

Monthly estimates of the total population of the United States; annual mid-year estimates of the population of States, by broad age groups, and of the United States by age, color, and sex; annual estimates of the components of population change. Estimates of the population selected metropolitan areas and their component counties. Projections of the future population of the United States and individual States. Approximately 20 reports each year.

P-26 FEDERAL-STATE COOPERATIVE PROGRAM FOR POPULATION ESTIMATES. Population estimates for counties for selected States in which the figures are prepared by a State agency as part of the Federal-State Cooperative Program for Local Population Estimates.

P-27 FARM POPULATION.

(Census-ERS). Data on the size and selected characteristics of the farm population of the United States. Issued jointly with the Economic Research Service, U.S. Department of Agriculture. One or two reports each year.

P-28 SPECIAL CENSUSES. Results of population censuses taken at the request and expense of city or other local governments. Subscription includes only the quarterly and annual summaries showing the total population figures for all the censuses conducted during the particular period. Individual reports issued for areas of 50,000 or more, showing the population by age, sex, and color are available separately. See "How to Order Reports." Five reports each year.

P-60 CONSUMER INCOME. Information on the proportions of families and persons at various income levels. Also data on the relationship of income to age, sex, color, family size, education, occupation, work experience, and other characteristics. Two reports each year.

P-65 CONSUMER BUYING INDICATORS.

Information on household ownership and recent purchase of cars, trucks, and selected household equipment. Ownership and purchase data are shown by income, age of head, residence, race, and other household characteristics. Annually.

HOW TO ORDER REPORTS

All Current Population Reports are sold as a single subscription for \$30.50 a year (add \$7.75 for foreign mailing). Price includes Series P-20, P-23, P-25, P-26, P-27, P-28 (quarterly and annual summaries only), P-60, and P-65.

Subscriptions to individual series are not sold separately, but single copies of reports issued in all series except P-28 may be obtained from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Individual city or area reports in the P-28 series may be ordered from the Social and Economic Statistics Administration—prices vary. For information on CP reports, write to Publications Distribution Section, Social and Economic Statistics Administration, Washington, D.C. 20233.

C56.218 (Nos.)

IF YOU'RE RUSTY ON THE SUBJECT OF CORROSION, READ THESE!

Here are four Metals & Ceramics Information Center reports on corrosion and its treatment:

"The Corrosion of Metals in Marine Environments" is a current resource of information on the advanced metals and their use in hostile marine environments. It helps you to choose materials and equipment right for your job.

"Hot Corrosion in Gas Turbines" deals primarily with the sulfidation problem and explains major testing methods and research.

"Oxidation of Iron, Nickel, and Cobalt-base Alloys" guides the engineer or metallurgist to current data on oxidation of the pure metals and their alloys, as well as of more complex engineering alloys.

"Shot Peening for Improved Fatigue Properties and Stress-Corrosion Resistance" contains a summary of current peening procedures, and methods of control and improvement that can be achieved with these techniques.

Any one or all four of these studies can be invaluable to you in your research or in practical day to day operations. Put them on your shelf by filling out and returning the coupon below.

- ☐ Send me _____ copies of the MCIC report SHOT PEENING FOR IMPROVED FATIGUE PROPERTIES AND STRESS-CORROSION RESISTANCE at \$7.50 each. (\$10.00 foreign) AD-735 409.

Cotton Broadwoven Gray Goods

First Quarter 1973

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

June 1973

SERIES: MQ-22T.1(73)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data--Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

Now Available — Selected Research Packages In 10 Environmental Areas

Ten information packages covering selected research projects in environmental management are now available to you at special rates from NTIS and the Smithsonian Institution's Science Information Exchange.

Each customized NTISearch generally costs \$25. And each computer search by SIE is \$50. But these ten searches were recently produced for a private organization. And now you can have this important information package for much less.

More than 100,000 notices of research proposals and current projects, covering all fields of basic and applied science, are registered by SIE every year and computerized for storage and retrieval. NTIS adds annually over 60,000 new reports of government-funded research in science, technology and business to its computerized file.

Notices of current research appear on one side of a standard 8½ x 11 form. It shows the supporting agency, the title of the project, the names of the principal investigators and their associates and their scientific specialty, the recipient institution, the funds allotted and the fiscal year the project falls in, and provides a brief description of project objectives.

Each NTIS abstract is copied on one side of a 4 x 6 reference card. It shows the report title, date, corporate and personal author, number of pages, accession number for ordering and the abstract.

Environmental Problems Specific to Urban Areas (74 ongoing projects, \$35; 65 completed projects, \$20).

Conversion of Coal to Synthetic Fuels (31 ongoing projects, \$35; 40 completed projects, \$20).

Nitrogen Oxides In Air Pollution (113 ongoing projects, \$45; 55 completed projects, \$20).

Economic Incentives for Pollution Control: economic benefits from improved water quality; pollution charges and costs; economic feasibility of pollution control techniques (70 ongoing projects, \$35; 45 completed projects, \$20).

Water Rights Studies: includes water rights doctrine, appropriations, doctrine, zoning, regulatory laws, easements, riparian rights, permits, and legal conflicts for fresh and marine waters (61 ongoing projects, \$35; 42 completed projects, \$20).

Mathematical Modeling as a Technique in Water Pollution Control: the application or development of various numeric, statistical, digital, or generalized math models for analysis of water quality problems (57 ongoing projects, \$35; 50 completed projects, \$20).

Textile Processing Wastes (23 ongoing projects, \$35; 15 completed projects, \$20).

Metal Processing Wastes (43 ongoing projects, \$35; 40 completed projects, \$20).

Chemical Processing Wastes: treatment and disposal of chemical waste water from manufacturers, such as petroleum, pesticide, polymer, etc. (60 ongoing projects, \$35; 53 completed projects, \$20).

Automobile Exhaust and Emission: air pollution reduction from gasoline or diesel powered vehicles; monitoring and analysis of combustion products; and alternate low-emission engine systems (154 ongoing projects, \$45; 70 completed projects, \$20).

Mail now to: **NATIONAL TECHNICAL INFORMATION SERVICE**
U.S. Department of Commerce
Springfield, Va. 22151

Please send notices of research projects and/or abstracts in the areas I have checked, at \$20 for NTIS abstracts and \$35 per subject area for SIE notices (\$45 if more than 100 notices per search).

CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Gray Goods

Second Quarter 1973

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

September 1973

SERIES: MQ-22T.1(73)-2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data--Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

Cotton Broadwoven Gray Goods

Third Quarter 1973

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

January 1974

SERIES: MQ-22T.1(73)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data--Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

THE 1972 ECONOMIC CENSUSES

Early in 1972...we asked the business community's help in providing us with the basic information about its business activities during the year 1972. The facts were requested so that we, in turn, could provide YOU with the data from various economic areas! NOW - the results are in! They're being analyzed...fed to computers...and published for YOUR use....YOUR needs...YOUR advantage in keeping up with the latest trends in the business and industrial worlds.

There are hundreds of reports coming off the press as fast as figures are tabulated.

Get the facts! Have your name placed on our mailing lists to receive a copy of the Publications Programs and publications order forms (free of charge), which describe the contents of the reports and the scheduled release dates. Please fill in your name and address, check the appropriate boxes below, and mail to:

Cotton Broadwoven Gray Goods

Fourth Quarter 1973

April 1974

SERIES: MQ-22T.1(73)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data --Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

THE 1972 ECONOMIC CENSUSES

Early in 1972...we asked the business community's help in providing us with the basic information about its business activities during the year 1972. The facts were requested so that we, in turn, could provide YOU with the data from various economic areas! NOW - the results are in! They're being analyzed...fed to computers...and published for YOUR use....YOUR needs...YOUR advantage in keeping up with the latest trends in the business and industrial worlds.

There are hundreds of reports coming off the press as fast as figures are tabulated.

Get the facts! Have your name placed on our mailing lists to receive a copy of the Publications Programs and publications order forms (free of charge), which describe the contents of the reports and the scheduled release dates. Please fill in your name and address, check the appropriate boxes below, and mail to:

56. 216:

Cotton Broadwoven Gray Goods

Summary for 1973

Issued July 1974

SERIES: MQ-22T,(73)-5

The data shown in this report summarize the information published in the quarterly MQ-22T.1 series. Any revisions made to quarterly data previously published in this series are noted.

DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series MQ-22T.1 Cotton Broadwoven Gray Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1972 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2

represent total production of the specified fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary product, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

DEFINITION OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

U.S. DEPARTMENT OF COMMERCE | Social and Economic Statistics Administration | BUREAU OF THE CENSUS

For sale by the Subscriber Services Section (Publications), Social and Economic Statistics Administration, Washington, D.C. 20233 or any Department of Commerce District Office. Price: 25 cents per copy--\$1.00 per year.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

Series	Title	Period Covered
MQ-22T Supp.	Broadwoven Fabrics-- Blends and Mixtures	1965
MQ-22T.1	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Man- made Fiber, and Wool Fabrics)	First Quarter 1972
MQ-22T.1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Charles T. Lee was directly responsible for the review of the data and preparation of the report. Elmer S. Biles, Chief of the Division, and Conrad J. Jacob, Assistant Division Chief for Commodity and Industry Programs, provided overall direction and coordination to this project.

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

6. 2/16:

Cotton Broadwoven Gray Goods

First Quarter 1974

Issued July 1974

SERIES: MQ-22T.1(74)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

TABLE 1A.--SUMMARY OF SEASONALLY ADJUSTED PRODUCTION DATA, BY CLASS OF FABRIC: 1969 TO 1974

Note: TABLE 5. STOCKS OF SELECTED FILAMENT YARNS AT COTTON MILLS has been discontinued with the publication of the first quarter, 1974, MQ22T.1, Cotton Broadwoven Fabrics report.

¹10 to 25 percent of this item is imputed. (See description of survey for a discussion of imputation rates.)

²25 to 50 percent of this item is imputed. (See description of survey for a discussion of imputation rates.)

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data -- Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

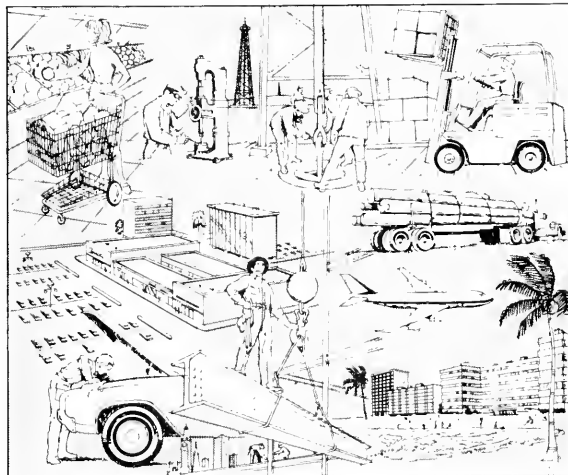

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

It's brand new!

MINI-GUIDE

to the 1972 Economic Censuses

With hundreds of reports on the economic censuses now coming off the press, the MINI-GUIDE is designed as YOUR guide through the thousands of available facts, providing concise and handy information on the publications YOU want.

Geared for potential users of Census Bureau data, as well as for experienced users, **MINI-GUIDE** chapters provide useful information and references on:

- General information on the 1972 Economic Censuses
- Data collected and publication programs for the individual economic censuses
- Geographic areas for which data are available
- The Standard Industrial Classification System

The economic censuses conducted by the Bureau of the Census are a major source of information about the structure and function of the Nation's economy. Let the **MINI-GUIDE** serve as your introduction to each of the nine economic census programs listed below:

Retail Trade
Selected Service Industries
Wholesale Trade
Construction Industries
Manufactures
Mineral Industries

Transportation
Enterprise Statistics
Outlying Areas

For a valuable reference and guide to the economic censuses, the **MINI-GUIDE TO THE 1972 ECONOMIC CENSUSES** may now be ordered from the Publications Distribution Section, Social and Economic Statistics Administration, Washington, D.C. 20233.

44 pages at \$1.00

Cotton Broadwoven Gray Goods

Second Quarter 1974

Issued September 1974

SERIES: MQ-22T.1(74)-2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data -- Information on Loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

THE 1972 ECONOMIC CENSUSES

Early in 1972...we asked the business community's help in providing us with the basic information about its business activities during the year 1972. The facts were requested so that we, in turn, could provide YOU with the data from various economic areas! NOW - the results are in! They're being analyzed...fed to computers...and published for YOUR use....YOUR needs...YOUR advantage in keeping up with the latest trends in the business and industrial worlds.

There are hundreds of reports coming off the press as fast as figures are tabulated.

Get the facts! Have your name placed on our mailing lists to receive a copy of the Publications Programs and publications order forms (free of charge), which describe the contents of the reports and the scheduled release dates. Please fill in your name and address, check the appropriate boxes below, and mail to:

Cotton Broadwoven Gray Goods

Third Quarter 1974

Issued December 1974

SERIES: MQ-22T.1(74)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

TABLE 1A.--SUMMARY OF SEASONALLY ADJUSTED PRODUCTION DATA, BY CLASS OF FABRIC: 1969 TO 1974
(Millions of linear yards)

Quarter and year	Cotton broadwoven gray goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data--Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

COUNTY^{AND} CITY DATA BOOK 1972

A compact and comprehensive presentation of local area data tailored for use by market researchers, business analysts, economists, legislators, statisticians, librarians, and others.

Indispensable as a quick reference tool for a wide variety of economic and social facts on counties, cities, metropolitan areas, urbanized areas, and unincorporated places of 25,000 inhabitants or more in the United States.

TAKEN FROM—

The 1970 Census of Population and Housing, the 1969 Census of Agriculture, and the 1967 Censuses of Business, Governments, Manufactures, and Mineral Industries. Statistics from other governmental and private agencies are also included.

CONTAINS—

196 items of statistical data for each of the 50 States and 3,141 counties or county equivalents in the U.S.

163 items for each of 243 standard metropolitan statistical areas (SMSA's)

194 items for each of 840 cities of 25,000 inhabitants or more

99 items for each of 248 urbanized areas and 76 unincorporated places of 25,000 inhabitants or more.

ALSO INCLUDES—

maps for each State, showing counties, SMSA's, and cities of 25,000 inhabitants or more

explanatory notes and source citations
appendixes that expand or explain the coverage of the tables

SUBJECTS COVERED—

- Agriculture
- Area
- Bank deposits
- Birth and death rates
- Business firms
- Climate
- Crime
- Education
- Electric bills
- Employment
- Farms
- Governmental revenue and expenditures
- Home equipment
- Hospitals
- Housing
- Income of families

- Labor force
- Local government employment
- Manufactures
- Migration
- Mineral industries
- Population
- Presidential vote
- Public assistance
- Retail trade
- Savings
- Selected services
- Social security
- Wholesale trade

1,076 pp. (clothbound) at \$18.65

Cotton Broadwoven Gray Goods

Fourth Quarter 1974

Issued March 1975

SERIES: MQ-22T.1(74)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 10 and 11.

TABLE 1A.--SUMMARY OF SEASONALLY ADJUSTED PRODUCTION DATA, BY CLASS OF FABRIC: 1969 to 1974
(Millions of linear yards)

Quarter and year	Cotton broadwoven gray goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, towelings, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

(D) Data withheld to avoid disclosing figures for individual companies.

^F Revised.

¹10 to 25 percent of this item is imputed. (See description of survey for a discussion of imputation rates.)

²Over 25 percent of this item is imputed.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-221 reports were collected on Census Form MQ-221, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data -- Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

Cotton Broadwoven Gray Goods

Summary for 1974

Issued July 1975

SERIES: MQ-22T.1(74)-5

DESCRIPTION OF SURVEY

The statistics in this publication summarize the information published in Census quarterly series MQ-22T.1 Cotton Broadwoven Gray Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1973 annual survey.

The data in this report are not adjusted for number of working days.

COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broadwoven Fabrics (gray)." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 through 3 represent total production of the specified fabrics by all weaving mills regardless of their primary activity.

However, because a single report is collected from an individual mill, the information shown in tables 4 and 5 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary product, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Production of Knit Fabric. Data are available upon request.

DEFINITION OF TERMS

Broad Fabrics—Fabric over 12" in width, as made.

Cotton Fabrics—Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton—Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233, or call Carole A. Klein, telephone 301-763-7541.

U.S. DEPARTMENT OF COMMERCE | Bureau of the Census

For sale by the Subscriber Services Section (Publications), Bureau of the Census, Washington, D.C. 20233, or any Department of Commerce district office. Price: 25 cents per copy—\$1.00 per year.

Cotton Broadwoven Gray Goods

First Quarter 1975

Issued June 1975

SERIES: MQ-22T.1(75)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

TABLE 1A.--SUMMARY OF SEASONALLY ADJUSTED PRODUCTION DATA, BY CLASS OF FABRIC: 1970 TO 1975

(Millions of linear yards)

Quarter and year	Cotton broadwoven gray goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census quarterly Form MQ-22T, "Broadwoven Fabrics (Gray, Except Knit)," from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent for any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to non-response, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipts of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, "Cotton Broadwoven Gray Goods." The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

RELATED REPORTS

The following is a list of selected current and recent textile reports published by the Bureau of the Census in the Current Industrial Reports series:

Series	Title	Frequency
M22A	Woven Fabrics: Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters—Consumption, Stocks, and Spindle Activity	Monthly
MQ-22K	Knit Fabric Production	Quarterly
MA-22F	Yarn Production	Annually
MA-22G	Narrow Fabrics	Annually
MA-22S	Broadwoven Fabrics Finished	Annually
MQ-23X	Sheets, Pillowcases, and Towels	Quarterly

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are shown below:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics—Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972

EXPLANATION OF TERMS

Cotton Fabrics—Wholly or chiefly by weight of cotton.

Blends and Mixtures—Fabrics made from more than one fiber and classified in the same way as other

fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity—Production is reported in thousands of linear yards except blanketing, which is in thousands of linear yards, 72-inch width or equivalent, and selected items in thousands of pounds as noted.

Production—Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed, Loom-Hours, and Stocks of Selected Filament Yarns—Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to Mill Assignment Data—Information on loom-hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom-hours, and stocks are comparable.

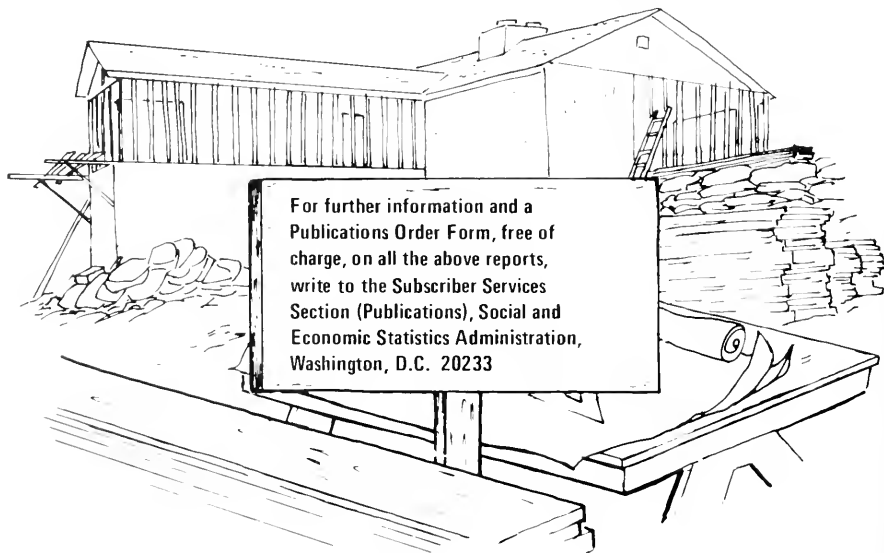

CURRENT CONSTRUCTION REPORTS

CONSTRUCTION accounts for approximately 12 percent of the gross national product!

To assist industry representatives, research specialists, market analysts, and government officials interested in this vital segment of the Nation's economy, the Bureau of the Census issues monthly, quarterly, and annual reports on the value of new construction put in place, building permits, housing starts, housing completions, housing sales, alterations and repairs and demolition of residential structures.

Current Construction Reports include:

- C20 - Housing Starts
- C22 - Housing Completions
- C25 - Sales of New One-Family Homes
- C30 - Value of New Construction Put in Place
- C40 - Housing Authorized by Building Permits and Public Contracts
- C41 - Authorized Construction - Washington, D.C. Area
- C45 - Permits Issued for Demolition of Residential Structures in Selected Cities
- C50 - Expenditures on Residential Additions, Alterations, Maintenance and Repairs, and Replacements

For further information and a Publications Order Form, free of charge, on all the above reports, write to the Subscriber Services Section (Publications), Social and Economic Statistics Administration, Washington, D.C. 20233

COUNTY AND CITY DATA BOOK 1972

A compact and comprehensive presentation of local area data tailored for use by market researchers, business analysts, economists, legislators, statisticians, librarians, and others.

Indispensable as a quick reference tool for a wide variety of economic and social facts on counties, cities, metropolitan areas, urbanized areas, and unincorporated places of 25,000 inhabitants or more in the United States.

TAKEN FROM—

The 1970 Census of Population and Housing, the 1969 Census of Agriculture, and the 1967 Censuses of Business, Governments, Manufactures, and Mineral Industries. Statistics from other governmental and private agencies are also included.

CONTAINS—

196 items of statistical data for each of the 50 States and 3,141 counties or county equivalents in the U.S.

163 items for each of 243 standard metropolitan statistical areas (SMSA's)

194 items for each of 840 cities of 25,000 inhabitants or more

99 items for each of 248 urbanized areas and 76 unincorporated places of 25,000 inhabitants or more.

ALSO INCLUDES—

maps for each State, showing counties, SMSA's, and cities of 25,000 inhabitants or more

explanatory notes and source citations

appendixes that expand or explain the coverage of the tables

SUBJECTS COVERED—

Agriculture	Income of families
Area	Labor force
Bank deposits	Local government employment
Birth and death rates	Manufactures
Business firms	Migration
Climate	Mineral industries
Crime	Population
Education	Presidential vote
Electric bills	Public assistance
Employment	Retail trade
Farms	Savings
Governmental revenue and expenditures	Selected services
Home equipment	Social security
Hospitals	Wholesale trade
Housing

Cotton Broadwoven Gray Goods

Second Quarter 1975

Issued September 1975

SERIES: MQ-22T.1(75)-2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

TABLE 1A.--SUMMARY OF SEASONALLY ADJUSTED PRODUCTION DATA, BY CLASS OF FABRIC. 1970 TO 1975

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census quarterly Form MQ-22T, "Broadwoven Fabrics (Gray, Except Knit)," from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent for any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to non-response, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipts of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, "Cotton Broadwoven Gray Goods." The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

RELATED REPORTS

The following is a list of selected current and recent textile reports published by the Bureau of the Census in the Current Industrial Reports series:

Series	Title	Frequency
M22A	Woven Fabrics: Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters—Consumption, Stocks, and Spindle Activity	Monthly
MQ-22K	Knit Fabric Production	Quarterly
MA-22F	Yarn Production	Annually
MA-22G	Narrow Fabrics	Annually
MA-22S	Broadwoven Fabrics Finished	Annually
MQ-23X	Sheets, Pillowcases, and Towels	Quarterly

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are shown below:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics—Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972

EXPLANATION OF TERMS

Cotton Fabrics—Wholly or chiefly by weight of cotton.

Blends and Mixtures—Fabrics made from more than one fiber and classified in the same way as other

fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity—Production is reported in thousands of linear yards except blanketing, which is in thousands of linear yards, 72-inch width or equivalent, and selected items in thousands of pounds as noted.

Production—Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating—Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed, Loom-Hours, and Stocks of Selected Filament Yarns—Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to Mill Assignment Data—Information on loom-hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom-hours, and stocks are comparable.

We Have The Facts You Need For...

Market Analysis

Cotton Broadwoven Gray Goods

Third Quarter 1975

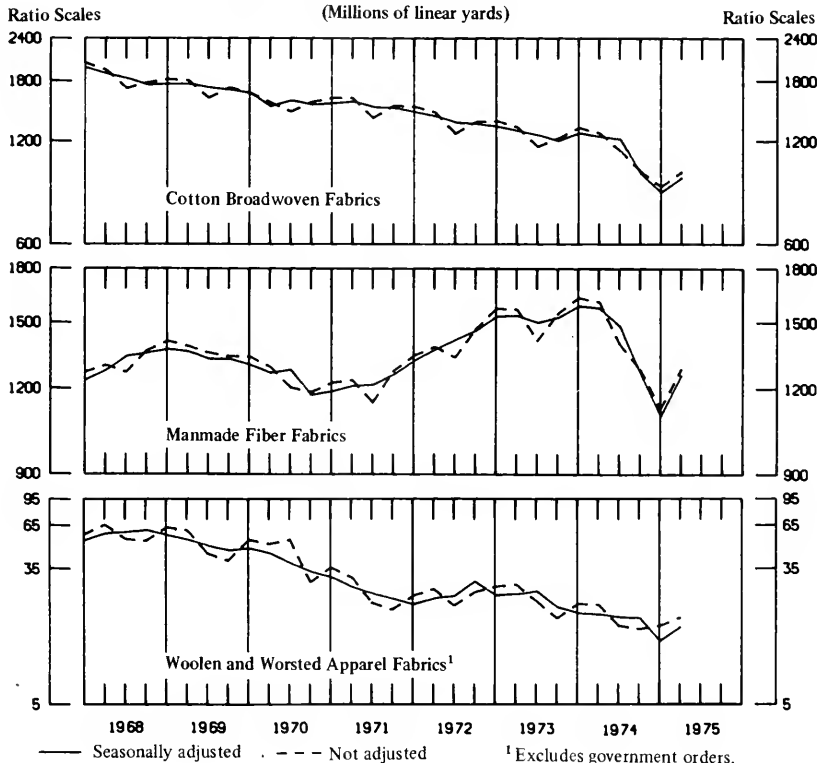

Issued December 1975

SERIES: MQ-22T.1(75)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. Detailed information on production of manmade fiber fabrics and woolen and worsted apparel fabrics are available in Current Industrial Reports Series MQ-22T.2 and MQ-22T.3, respectively. A more complete description of the survey appears on pages 9 and 10.

BROADWOVEN FABRICS PRODUCTION, 1968 - 1975

U.S. DEPARTMENT OF COMMERCE | Bureau of the Census

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233. For sale by the Subscriber Services Section (Publications), Bureau of the Census, Washington, D.C. 20233, or any Department of Commerce district office. Price: 25 cents per copy, \$1.00 per year.

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census quarterly Form MQ-22T, "Broadwoven Fabrics (Gray, Except Knit)," from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent for any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to non-response, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipts of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, "Cotton Broadwoven Gray Goods." The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

RELATED REPORTS

The following is a list of selected current and recent textile reports published by the Bureau of the Census in the Current Industrial Reports series:

Series	Title	Frequency
M22A	Woven Fabrics: Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters—Consumption, Stocks, and Spindle Activity	Monthly
MQ-22K	Knit Fabric Production	Quarterly
MA-22F	Yarn Production	Annually
MA-22G	Narrow Fabrics	Annually
MA-22S	Broadwoven Fabrics Finished	Annually
MQ-23X	Sheets, Pillowcases, and Towels	Quarterly

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are shown below:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics—Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972

EXPLANATION OF TERMS

Cotton Fabrics—Wholly or chiefly by weight of cotton.

Blends and Mixtures—Fabrics made from more than one fiber and classified in the same way as other

fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity Production is reported in thousands of linear yards except blanketing, which is in thousands of linear yards, 72-inch width or equivalent, and selected items in thousands of pounds as noted.

Production—Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating—Represents number of looms operating on the specific fabrics at end of quarter.

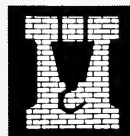

Yarns Consumed, Loom-Hours, and Stocks of Selected Filament Yarns—Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to Mill Assignment Data—Information on loom-hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom-hours, and stocks are comparable.

THE 1972 ECONOMIC CENSUSES

Early in 1973...we asked the business community's help in providing us with the basic information about its business activities during the year 1972. The facts were requested so that we, in turn, could provide YOU with the data from various economic areas! NOW—the results are in! They've been analyzed...fed to computers...and published for YOUR use....YOUR needs...YOUR advantage in keeping up with the latest trends in the business and industrial worlds.

There are hundreds of reports coming off the press as fast as figures are tabulated.

Get the facts! Have your name placed on our mailing lists to receive publications programs, which describe the contents of the reports and list the scheduled release dates, and publication announcements, which furnish prices and order forms for reports in print. Please fill in the request form below and mail to:

56. 216:

Cotton Broadwoven Gray Goods

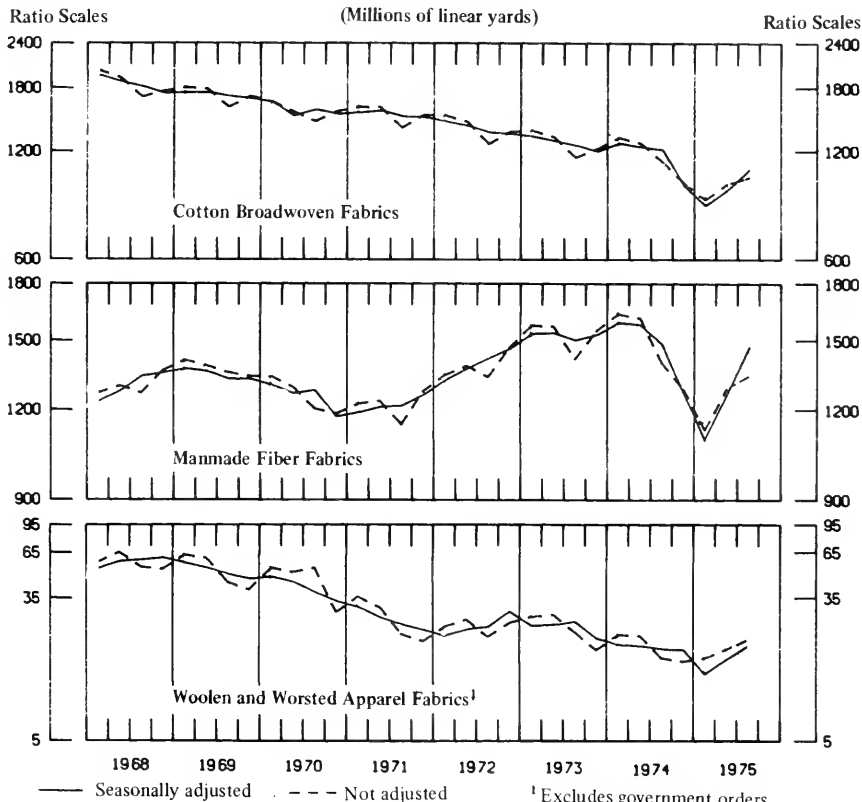

Fourth Quarter 1975

Issued March 1976

SERIES: MQ-22T.1(75)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. Detailed information on production of manmade fiber fabrics and woolen and worsted apparel fabrics are available in Current Industrial Reports Series MQ-22T.2 and MQ-22T.3, respectively. A more complete description of the survey appears on pages 9 and 10.

BROADWOVEN FABRICS PRODUCTION, 1968 - 1975

U.S. DEPARTMENT OF COMMERCE | Bureau of the Census

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233. For sale by the Subscriber Services Section (Publications), Bureau of the Census, Washington, D.C. 20233, or any Department of Commerce district office. Price: 25 cents per copy, \$1.00 per year.

TABLE 1A.--SUMMARY OF SEASONALLY ADJUSTED PRODUCTION DATA, BY CLASS OF FABRIC: 1970 TO 1975

(Millions of linear yards)

Quarter and year	Cotton broadwoven gray goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census quarterly Form MQ-22T, "Broadwoven Fabrics (Gray, Except Knit)," from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent for any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to non-response, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipts of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, "Cotton Broadwoven Gray Goods." The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

RELATED REPORTS

The following is a list of selected current and recent textile reports published by the Bureau of the Census in the Current Industrial Reports series:

Series	Title	Frequency
M22A	Woven Fabrics: Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters—Consumption, Stocks, and Spindle Activity	Monthly
MQ-22K	Knit Fabric Production	Quarterly
MA-22F	Yarn Production	Annually
MA-22G	Narrow Fabrics	Annually
MA-22S	Broadwoven Fabrics Finished	Annually
MQ-23X	Sheets, Pillowcases, and Towels	Quarterly

SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are shown below:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics—Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972

EXPLANATION OF TERMS

Cotton Fabrics—Wholly or chiefly by weight of cotton.

Blends and Mixtures—Fabrics made from more than one fiber and classified in the same way as other

fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of Quantity—Production is reported in thousands of linear yards except blanketing, which is in thousands of linear yards, 72-inch width or equivalent, and selected items in thousands of pounds as noted.

Production—Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

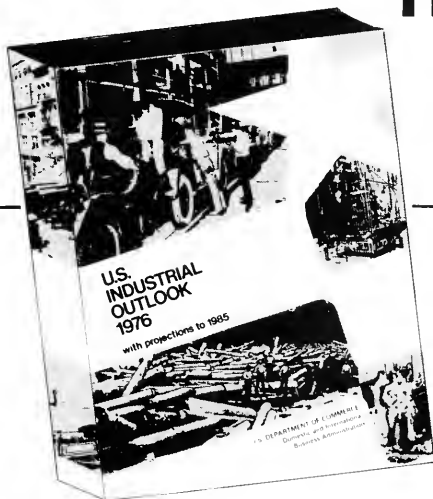

Looms Operating Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed, Loom-Hours, and Stocks of Selected Filament Yarns—Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to Mill Assignment Data—Information on loom-hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom-hours, and stocks are comparable.

It's good business

to base your business decisions
on the facts.

U.S. INDUSTRIAL OUTLOOK puts the facts at your fingertips. It could be the best investment you will make this year.

A great bargain for small business: the services of a staff of 100 industry analysts for \$5.45 per copy. Helpful statistics, analyses and comments on more than 200 industries to back up your own business judgment.

U.S. INDUSTRIAL OUTLOOK 1976 gives you the facts you need about actual product and industry shipments, exports, imports, employment trends since 1967 with projections for 10 years into the future.

A service of the U.S. Department of Commerce, Domestic and International Business Administration, to foster the progress of business.

Cotton Broadwoven Gray Goods

Summary for 1975

Issued August 1976

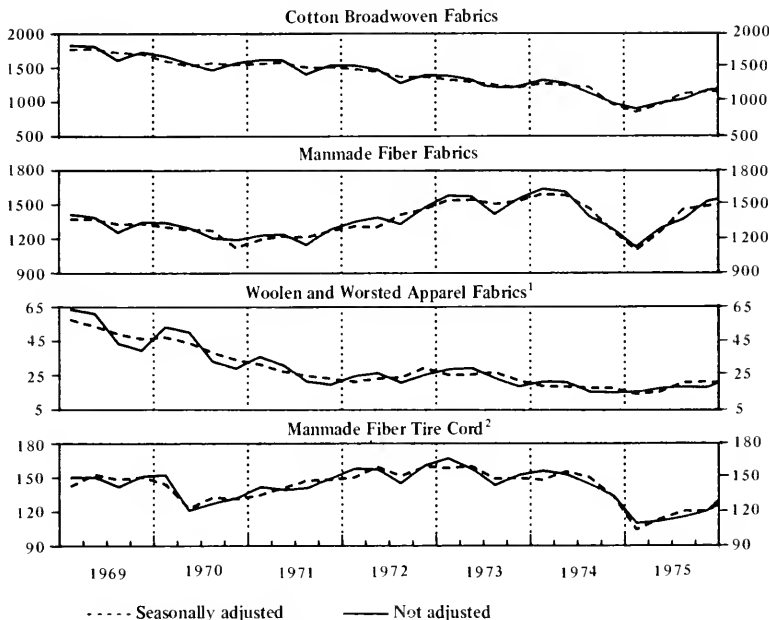

SERIES: MQ-22T.1 (75)-5

SUMMARY OF FINDINGS

Total production of cotton broadwoven gray goods decreased by 13 percent to 4,094.7 million linear yards in 1975. All major product lines decreased except for

carded colored yarn fabrics which increased by 33 percent. Within that product class denims increased by 52 percent and all other carded colored yarn decreased by 35 percent.

BROADWOVEN FABRICS PRODUCTION: 1969 TO 1975 (Millions of linear yards)

¹ Excludes government orders.

² Rayon, nylon, and polyester fibers only. Includes tire cord fabrics.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233, or call Carole A. Klein, (301) 763-7541.

U.S. Department of Commerce BUREAU OF THE CENSUS

For sale by the Subscriber Services Section (Publications), Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce district office. Postage stamps not acceptable; currency submitted at sender's risk. Remittances from foreign countries must be by international money order or by a draft on a U.S. bank. Price: 25 cents per copy, \$1.45 per year.

DESCRIPTION OF SURVEY

The statistics in this publication summarize the information published in Census quarterly series MQ-22T.1, **Cotton Broadwoven Gray Goods**, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1974 annual survey.

The data in this report are not adjusted for number of working days.

The information contained in this report is collected on Census quarterly form MQ-22T, **Broadwoven Fabrics (gray)**. A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

The production figures shown in tables 1 through 3 represent total production of the specified fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 4 and 5 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary product, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data.

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, **Cotton Broadwoven Gray Goods**. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information

thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

EXPLANATION OF TERMS

Cotton fabrics—Wholly or chiefly by weight of cotton.

Blends and mixtures—Fabrics made from more than one fiber and classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

Units of quantity—Production is reported in thousands of linear yards except blanketing, which is in thousands of linear yards, 72-inch width or equivalent, and selected items in thousands of pounds as noted.

Production—Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms operating—Represents number of looms operating on the specific fabrics at end of quarter.

Yarns consumed, loom-hours, and stocks of selected filament yarns—Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data—Information on loom-hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data

shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom-hours, and stocks are comparable.

HISTORICAL NOTES

This survey began in 1943. Historical data may be obtained from *Current Industrial Reports* (called *Facts for Industry* before 1959), available at your local Federal Depository Library.

ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Current Nondurables Branch. Carole A. Klein was directly responsible for the review of the data and preparation of the report. Milton Eisen, Chief of the Division, and James S. Werking, Assistant Chief for Current Programs, provided overall direction and coordination to this project.
